2022****MOTION CONTROL DRIVES****SINAMICS S210****Servo Drive System**[siemens.com/d32](https://www.siemens.com/d32)

Dear Customer,

We are pleased to present you with the new Catalog D 32 · February 2022. The catalog provides a comprehensive overview of the SINAMICS S210 servo drive system.

The SINAMICS S210 servo drive system consists of a SINAMICS S210 servo converter, a SIMOTICS S servomotor and a matching One Cable Connection (OCC).

The single-axis AC/AC servo converter system stands out due to its high performance and dynamic response for mid-range Motion Control applications. In addition to updates and technical modifications, the new edition of the catalog has also been supplemented with the SIMOTICS S-1FT2 servo planetary geared motors, individual variants of the SIMOTICS S-1FK2 and S-1FT2 servomotors and with the SIMOTICS S-1FS2 servomotors shaft height 80.

The products listed in this catalog are also included in the Industry Mall. Please contact your local Siemens office for additional information.

Up-to-date information about SINAMICS S210 is available on the internet at: www.siemens.com/sinamics-s210

You can access our Industry Mall online at: www.siemens.com/industrymall

Your personal contact will be happy to receive your suggestions and recommendations for improvement.

You can find your representative in our Personal Contact database at: www.siemens.com/automation-contact

We hope that you will often enjoy using Catalog D 32 · February 2022 as a selection and ordering reference document and wish you every success with our products and solutions.

With kind regards

Frank Golüke

Integrated Drive Systems

Faster on the market and in the black with Integrated Drive Systems

Integrated Drive Systems are Siemens' trendsetting answer to the high degree of complexity that characterizes drive and automation technology today. The world's only true one-stop solution for entire drive systems is characterized in particular by its threefold integration: Horizontal, vertical, and lifecycle integration ensure that every drive system component fits seamlessly into the whole system, into any automation environment, and even into the entire lifecycle of a plant.

The outcome is an optimal workflow – from engineering all the way to service that entails more productivity, increased efficiency, and better availability. That's how Integrated Drive Systems reduce time to market and time to profit.

Horizontal integration

Integrated drive portfolio: The core elements of a fully integrated drive portfolio are frequency converters, motors, couplings, and gear units. At Siemens, they're all available from a single source. Perfectly integrated, perfectly interacting. For all power and performance classes. As standard solutions or fully customized. No other player in the market can offer a comparable portfolio. Moreover, all Siemens drive components are perfectly matched, so they are optimally interacting.

You can boost the availability of your application or plant to up to

99%*

*e.g., conveyor application

Vertical integration

Thanks to **vertical integration**, the complete drive train is seamlessly integrated in the entire automation environment – an important prerequisite for production with maximum value added. Integrated Drive Systems are part of Totally Integrated Automation (TIA), which means that they are perfectly embedded into the system architecture of the entire industrial production process. This enables optimal processes through maximum communication and control.

With TIA Portal you can cut your engineering time by up to

30%

Lifecycle integration

Lifecycle integration adds the factor of time: Software and service are available for the entire lifecycle of an Integrated Drive System. That way, important optimization potential for maximum productivity, increased efficiency, and highest availability can be leveraged throughout the system's lifecycle – from planning, design, and engineering to operation, maintenance, and all the way even to modernization.

With Integrated Drive Systems, assets become important success factors. They ensure shorter time to market, maximum productivity and efficiency in operation, and shorter time to profit.

With Integrated Drive Systems you can reduce your maintenance costs by up to

15%

The SINAMICS converter family

Overview

Integration in automation

Totally Integrated Automation and communication

SINAMICS is an integral component of the Siemens "Totally Integrated Automation" concept. Integrated SINAMICS systems covering configuration, data storage, and communication at automation level ensure low-maintenance solutions with the SIMATIC, SIMOTION and SINUMERIK control systems.

Depending on the application, the appropriate variable frequency drives can be selected and incorporated in the automation concept. With this in mind, the drives are clearly subdivided into their different applications. A wide range of communication options (depending on the drive type) are available for establishing a communication link to the automation system:

- PROFINET
- PROFIBUS
- EtherNet/IP
- Modbus TCP
- Modbus RTU
- AS-Interface
- BACnet MS/TP

Applications

SINAMICS is the comprehensive converter family from Siemens designed for machine and plant engineering applications. SINAMICS offers solutions for all drive tasks:

- Simple pump and fan applications in the process industry
- Demanding single drives in centrifuges, presses, extruders, elevators, as well as conveyor and transport systems
- Drive line-ups in textile, plastic film, and paper machines as well as in rolling mill plants
- Highly dynamic servo drives for machine tools, as well as packaging and printing machines

Overview

SINAMICS as part of the Siemens modular automation system**Innovative, energy-efficient and reliable drive systems and applications as well as services for the entire drive train**

The solutions for drive technology place great emphasis on the highest productivity, energy efficiency and reliability for all torque ranges, performance and voltage classes.

Siemens offers not only the right innovative variable frequency drive for every drive application, but also a wide range of energy-efficient low-voltage motors, geared motors, explosion-protected motors and high-voltage motors for combination with SINAMICS.

Furthermore, Siemens supports its customers with global pre-sales and after-sales services, with over 295 service points in 130 countries – and with special services e.g. application consulting or motion control solutions.

Energy efficiencyEnergy management process

Efficient energy management consultancy identifies the energy flows, determines the potential for making savings and implements them with focused activities.

Almost two thirds of the industrial power requirement is from electric motors. This makes it all the more important to use drive technology permitting energy consumption to be reduced effectively even in the configuration phase, and consequently to optimize plant availability and process stability. With SINAMICS, Siemens offers powerful energy efficient solutions which, depending on the application, enable a significant reduction in electricity costs.

System overview

1

The SINAMICS converter family

Overview

Up to 70 % potential for savings using variable-speed operation

SINAMICS enables great potential for savings to be realized by controlling the motor speed. In particular, huge potential savings can be recovered from pumps, fans and compressors which are operated with mechanical throttle and valves. Here, changing to variable-speed drives brings enormous economic advantages. In contrast to mechanical control systems, the power consumption at partial load operation is always immediately adjusted to the demand at that time. So energy is no longer wasted, permitting savings of up to 60 % – in exceptional cases even up to 70 %. Variable-speed drives also offer clear advantages over mechanical control systems when it comes to maintenance and repair. Current spikes when starting up the motor and strong torque surges become things of the past – and the same goes for pressure waves in pipelines, cavitation or vibrations which cause sustainable damage to the plant. Smooth starting and ramp-down relieve the load on the mechanical system, ensuring a significantly longer service life of the entire drive train.

Regenerative feedback of braking energy

In conventional drive systems, the energy produced during braking is converted to heat using braking resistors. Energy produced during braking is efficiently recovered to the supply system by versions of SINAMICS G and SINAMICS S drives with regenerative feedback capability and these devices do not therefore need a braking resistor. This permits up to 60 % of the energy requirement to be saved, e.g. in lifting applications. Energy which can be reused at other locations on a machine. Furthermore, this reduced power loss simplifies the cooling of the system, enabling a more compact design.

Energy transparency in all configuration phases

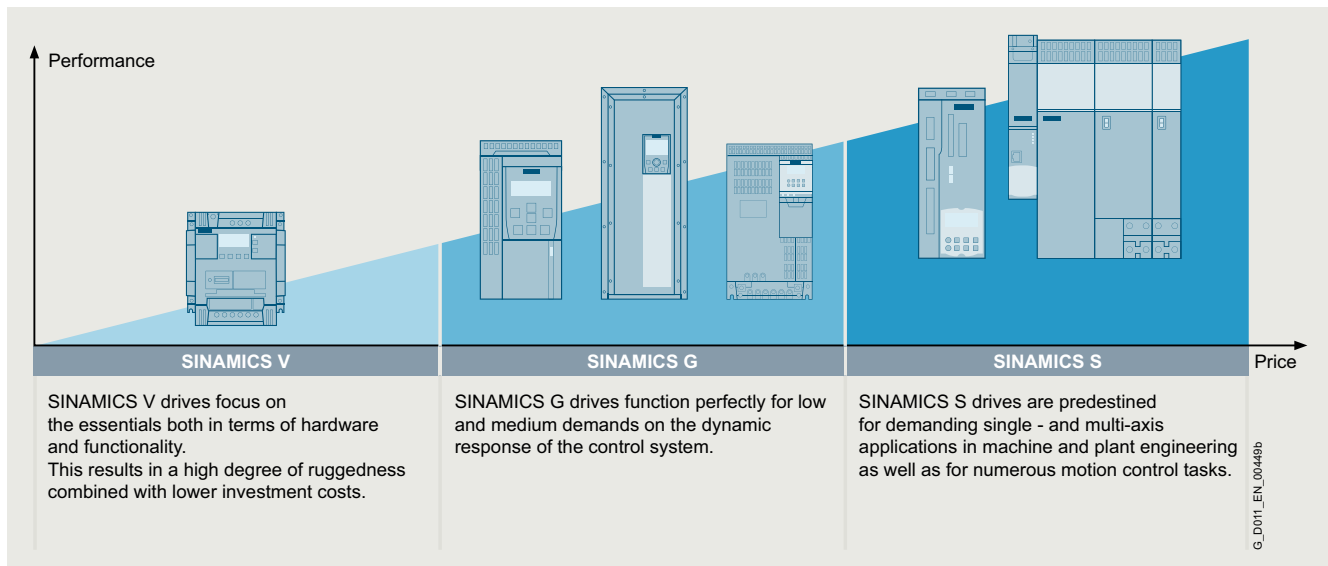

Early on, in the configuration phase, the SIZER for Siemens Drives engineering tool (integrated into TIA Selection Tool) provides information on the specific energy requirement. The energy consumption across the entire drive train is visualized and compared with different plant concepts.

SINAMICS in combination with energy-saving motors

Engineering integration stretches beyond the SINAMICS converter family to higher-level automation systems, and to a broad spectrum of energy-efficient motors with a wide range of performance classes, which, compared to previous motors, are able to demonstrate up to 10 % greater efficiency.

Variants

Depending on the application, the SINAMICS converter family offers the ideal variant for any drive task.

Overview

Platform concept

All SINAMICS variants are based on a platform concept. Joint hardware and software components, as well as standardized tools for dimensioning, configuration, and commissioning tasks ensure high-level integration across all components. SINAMICS handles a wide variety of drive tasks with no system gaps. The different SINAMICS variants can be easily combined with each other.

Quality management according to EN ISO 9001

SINAMICS conforms to the most exacting quality requirements. Comprehensive quality assurance measures in all development and production processes ensure a consistently high level of quality.

Of course, our quality management system is certified by an independent authority in accordance with EN ISO 9001.

IDS – Integration at its very best

The Siemens Integrated Drive Systems (IDS) solution offers perfectly matched drive components with which you can meet your requirements. The drive components reveal their true strengths as an Integrated Drive System over the full range from engineering and commissioning through to operation: Integrated system configuration is performed using the Drive Technology Configurator: Just select a motor and a converter and design them with the SIZER for Siemens Drives engineering tool (integrated into TIA Selection Tool). The STARTER and SINAMICS Startdrive commissioning tools integrate the motor data and at the same time simplify efficient commissioning. Integrated Drive Systems are incorporated in the TIA Portal – this simplifies engineering, commissioning and diagnostics.

Using the SINAMICS selection guide

The varying range of demands on modern variable frequency drives requires a large number of different types. Selecting the optimum drive has become a significantly more complex process. The application matrix shown simplifies this selection process considerably, by suggesting the ideal SINAMICS drive for examples of typical applications and requirements.

- The application type is selected from the vertical column
 - Pumping, ventilating, compressing
 - Moving
 - Processing
 - Machining
- The quality of the motion type is selected from the horizontal row
 - Basic
 - Medium
 - High

More Information

Further information about SINAMICS is available on the internet at www.siemens.com/sinamics

Practical application examples and descriptions are available on the internet at www.siemens.com/sinamics-applications

¹⁾ Industry-specific converters.

²⁾ Information on the SIMATIC ET 200pro FC-2 frequency converter is available in Catalog D 31.2 and at: www.siemens.com/et200pro-fc

Overview

Example: SINAMICS S210 converter frame size FSB, 200 V 1 AC, with SIMOTICS S-1FK2 servomotor shaft height 30

Example: SINAMICS S210 converter frame size FSB, 400 V 3 AC, with SIMOTICS S-1FK2 servomotor shaft height 63

The servo drive system comprises a SINAMICS S210 servo converter, a SIMOTICS S-1FK2, S-1FT2 or S-1FS2 servomotor and a matching One Cable Connection (OCC) for connecting the motor to the converter. SINAMICS S210 is a single-axis AC/AC servo converter system with high performance and dynamic response for mid-range Motion Control applications.

SINAMICS S210 servo converters are available for the following line voltages:

- 200 V to 240 V 1 AC (1 AC series)
- 200 V to 480 V 3 AC (3 AC series)

Flexible in application

The SINAMICS S210 is a flexible, versatile system. SIMOTICS S-1FK2, S-1FT2 or S-1FS2 series synchronous servomotors are installed in rotary and linear axes. The integrated One Cable Connection (OCC) interface allows user-friendly connection of a SIMOTICS S-1FK2, S-1FT2 or S-1FS2 motor with just one cable. The electronic motor type plate data can be read out, which eliminates the need to parameterize the converter with the motor data. This significantly simplifies and shortens commissioning.

In conjunction with the technological functions of the higher-level controller, there are many possibilities of motion – from continuous operation through positioning and synchronous operation, to coordinated motion of multiple axes via cyclic cams or interpolation – everything is possible.

The SINAMICS S210 converter has an integrated PROFINET communications interface for connecting to a control system.

The data exchange with the higher-level controllers takes place via standardized protocols – the PROFIdrive profile for positioning mode and the PROFIsafe profile for safety-related communication.

Thus, operation is optimally ensured with the SIMATIC S7 automation system. The drive axis is connected via technology objects and Motion Control blocks in the SIMATIC S7 or a SIMOTION controller.

High performance for fast and precise control

The high performance of the SINAMICS S210 servo drive system in conjunction with a SIMOTICS S-1FK2, S-1FT2 or S-1FS2 servomotor derives from the following features:

- Low moment of inertia and high overload capability of the motor
- High-resolution encoder with fast scanning
- Current controller clock cycle of 62.5 μ s and a pulse frequency of 8 kHz of the servo converter

This enables short cycle times on the machine even with complex motion control.

DC link coupling (only 3 AC series)

For devices of the 3 AC series, the DC links of up to six converters can be coupled. Thus, energy balancing between the axes is possible and energy produced during braking can be used by other axes for accelerating. This is not only efficient but also reduces the dissipated heat in the control cabinet, because the energy that is produced no longer has to be converted to heat in the braking resistor.

Optimized connection technology with One Cable Connection (OCC)

Example: SINAMICS S210 M12 OCC connecting cable

Motor and converter are simply connected to one another by one instead of the usual two or three cables. With this One Cable Technology, energy supply, encoder signals and braking signal

are brought together in a single cable. This results in the following advantages:

- Time-saving by laying only one cable
- Smaller installation space and space requirement in cable collars, tight bending radii
- Only one cable has to be cleaned. This is advantageous, e.g. in the pharmaceutical industry and where higher requirements are placed upon hygiene
- Can be ordered to the decimeter
- Compact connection system
- Rotatable connector on the motor side
- Motor with very low interfering contour for restricted installation space.

Cables are available in two different qualities:

- MOTION-CONNECT 500
- MOTION-CONNECT 800PLUS
- MOTION-CONNECT 400 (only for SIMOTICS S-1FS2)

In addition to the pre-assembled cable, individual components (connectors and products sold by the meter) can be ordered for self-assembly.

Overview

Easy commissioning via web server, One Button Tuning and SINAMICS Startdrive/TIA Portal (V15.1 or higher)

One Button Tuning

The web server of the converter offers a simple means of parameter assignment. The web server allows commissioning purely oriented on the functionality of the drive. With the web server, the SINAMICS S210 servo drive system can be brought into operation with a few clicks.

As a result of reading the electronic type plate of the connected SIMOTICS S-1FK2, S-1FT2 or S-1FS2 servomotor, only a few operator actions, such as automatic controller optimization with One Button Tuning, are necessary, as the motor and encoder are automatically detected. The controller parameters are automatically optimized. The three selectable dynamic levels of the controller can optimally take into account the desired behavior of the connected mechanics.

A motion of the axis can take place directly via the control panel during commissioning.

The customer benefits from the web server in many ways:

- Commissioning can also be easily done in places difficult to access, as the web server in the converter can also be accessed directly via PROFINET from the controller.
- The web server provides full diagnostic capability without the need for additional software.
- Commissioning and diagnostics can also be done without a cable via mobile devices, such as laptops, smart phones and tablets (an additional WLAN access point is necessary).
- Intuitive user interface

In addition to easy commissioning directly via the web server of the converter, engineering is also possible with SINAMICS Startdrive and TIA Portal (V15.1 or higher). The tool for configuration, commissioning and diagnostics has been optimized with regard to the consistent utilization of the TIA Portal advantages – one shared work environment for PLC, HMI and drives. SINAMICS firmware V5.2 or higher is required for SINAMICS S210 devices.

For more information, see the [Engineering tools selection](#).

Diagnostics

Faults and warnings are shown on the display located under the front cover, and they can be acknowledged with the Acknowledge button. Extensive diagnostics with plain text messages for cause and remedy information is possible via the web server.

Safety Integrated

The integrated safety functions provide highly effective, application-oriented protection for personnel and machinery (terms as defined in IEC 61800-5-2).

The following Safety Integrated Basic Functions are included as standard:

- Safe Torque Off (STO)
- Safe Brake Control (SBC)
- Safe Stop 1 time controlled (SS1-t)

The following Safety Integrated Extended Functions ¹⁾ are available as options:

- Safe Stop 1 (SS1)
- Safe Stop 2 (SS2)
- Safe Operating Stop (SOS)
- Safely-Limited Speed (SLS)
- Safe Speed Monitor (SSM)
- Safe Direction (SDI)
- Safely-Limited Acceleration (SLA)
- Safe Brake Test (SBT) diagnostic function

The Safety Integrated Functions are fully integrated into the drive system. They can be activated via fail-safe digital inputs on the converter (only STO and SS1-t) or via PROFINET with PROFIsafe.

The Safety Integrated Functions are implemented electronically and therefore require no additional installation effort or space in the control cabinet. Furthermore, the costs are considerably lower than for externally implemented monitoring functions.

The Safety Integrated Functions can be easily commissioned using the web server of the converter or SINAMICS Startdrive/TIA Portal V15.1 or higher.

Perfect combination with SIMATIC S7-1500, SIMATIC S7-1500 T-CPU, SIMATIC ET 200SP Open Controller, and PROFINET

It communicates with the higher-level control via PROFINET IRT. For optimal interaction between the controller and the SINAMICS S210 servo drive system, SIMATIC S7-1500, SIMATIC S7-1500 T-CPU, SIMATIC ET 200SP Open Controller, and SIMOTION can be used as the control system.

The SINAMICS S210 servo converter has an integrated PROFINET communications interface with a cycle of up to 250 µs for connecting to a control system.

Standardized protocols for linking to a higher-level control with RT and IRT are supported – the PROFIdrive profile with DSC for positioning mode and the PROFIsafe profile for safety-related communication. Functions, such as Shared Device, ring redundancy and PROFInergy, are also possible.

¹⁾ Available in SINAMICS V5.1 SP1 and higher. The Extended Functions require a Safety license.

System overview

1

SINAMICS S210 servo drive system

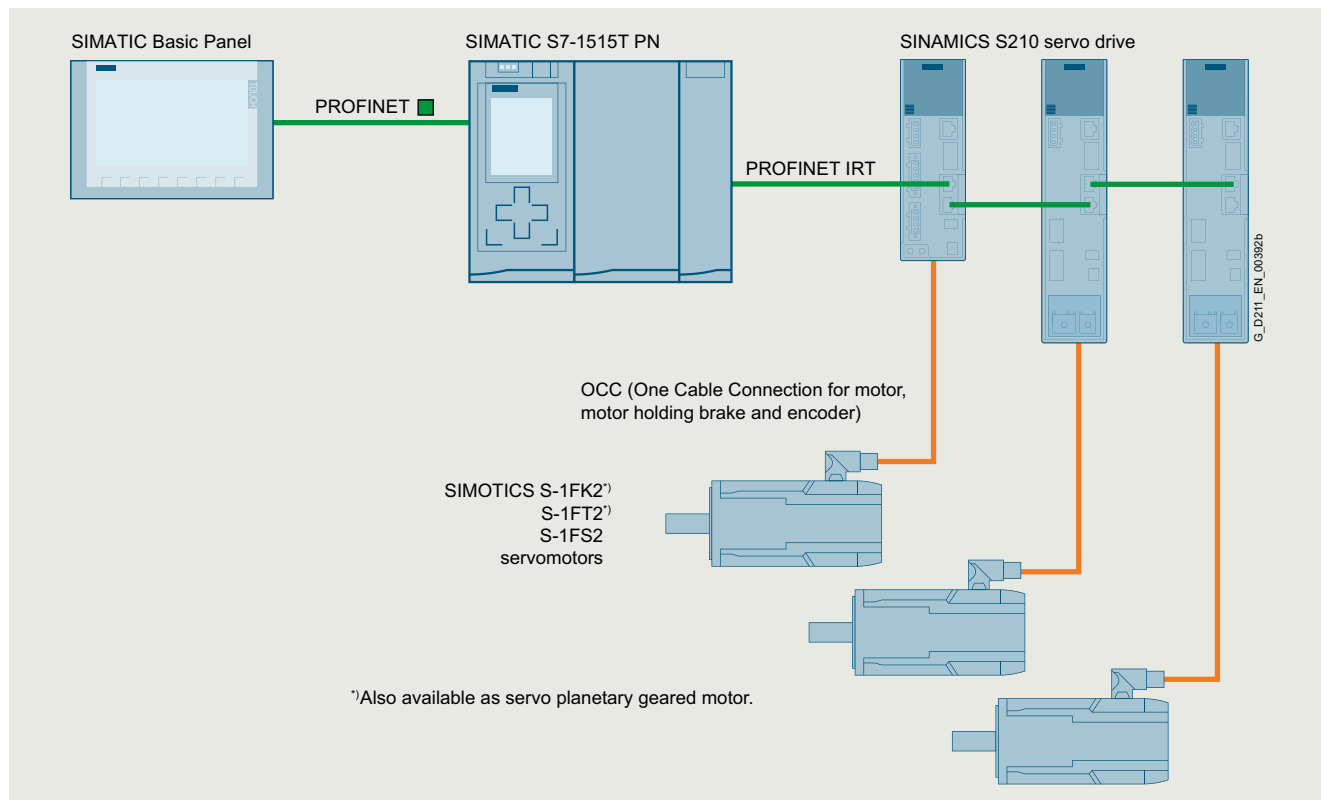

Overview

Everything from one source: Through the use of Motion Control functionalities in the controller, the combination of converter and SIMATIC S7 automation system or a SIMOTION controller allows ideally harmonized engineering. As a result, commissioning times are shortened.

Via technology objects and Motion Control blocks of the higher-level controller, there are many possibilities of motion, such as continuous operation, positioning and synchronous operation, and coordinated motion of multiple axes via cyclic cams or interpolation.

Siemens offers tested SIMATIC PLC/HMI application examples for connection of the servo drive system to a SIMATIC controller: www.siemens.com/sinamics-applications

Further information on the SIMATIC S7-1500, SIMATIC S7-1500 T-CPU and SIMATIC ET 200SP Open Controller is available in the ST 70 Catalog and on the internet under www.siemens.com/simatic-s7-1500

Example: Communication via PROFINET

Ruggedness

The SINAMICS S210 is equipped as standard with varnished or partially varnished modules. The painting on the modules protects the sensitive SMD components against corrosive gases, chemically active dust and moisture.

Can be used worldwide

In addition to the usual approvals, the SINAMICS S210 drive system also has UL approval for the North American market. This means that the drive system, comprising SINAMICS S210 and SIMOTICS S-1FK2, S-1FT2 or S-1FS2, including the One Cable Connection (OCC), can be used worldwide.

More information

A **Quick Installation Guide** is supplied in hard copy form in English with every SINAMICS S210. Further documentation, such as the operating instructions, is available free on the internet at:

www.siemens.com/sinamics-s210/documentation

Detailed information on the SINAMICS S210 drive system, including the latest technical documentation (brochures, tutorials, dimensional drawings, certificates, manuals and operating instructions), is available on the internet at:

www.siemens.com/sinamics-s210

and is also available via the Drive Technology Configurator (DT Configurator) on the internet.

The DT Configurator can be found in the Siemens Industry Mall at the following address:

www.siemens.com/sinamics-s210/configuration

When operating a SINAMICS S210 servo converter with a supply voltage of 200 V to 240 V 3 AC, an external, intrinsically safe braking resistor is always required.

SINAMICS S210 servo drive system with SIMOTICS S-1FK2 servomotors

	Standard lubrication				+	Smooth solid shaft															M 0 0
	Standard lubrication				+	Solid shaft with feather key															M 0 1
	Food-grade lubricant				+	Smooth solid shaft															M 1 0
	Food-grade lubricant				+	Solid shaft with feather key															M 1 1

Notes:

- The geared motor can only be delivered as a unit – motor plus gearbox – (no individual gearboxes).
- Not all combinations are possible.
- For shaft design with feather key, the gearbox data only applies to pulsating loads. With alternating load / reversal of direction of rotation, limitation of the torque as a function of the number of load cycles is required (see [Configuration Manual](#)).

Starter kit

Description	Article No.
SINAMICS S210 starter kit with Extended Safety Scope of delivery: <ul style="list-style-type: none"> • SINAMICS S210 servo converter, 230 V 1 AC, 400 W • SIMOTICS S-1FK2 servomotor, High Dynamic, shaft height 30, 400 W, without brake, shaft with feather key, with absolute encoder multiturn • One Cable Connection (OCC) motor connection cables, 3 m (9.84 ft) • Memory card with firmware V5.2 SP3 and Safety license (Extended Functions) The delivery quantity is limited to three units per customer.	6SL3200-0AE61-0AA0

Training case

Description	Article No.
SINAMICS S210 training case Scope of delivery: <ul style="list-style-type: none"> • 2 × SINAMICS S210 servo converters, 0.1 kW, 230 V 1 AC • 2 × SIMOTICS S-1FK2 servomotors, High Dynamic • 2 × One Cable Connection (OCC) motor connection cables • Rail, prepared for installation of a controller, e.g. SIMATIC S7-1500 (controller not included in scope of delivery) The SINAMICS S210 training case is supplied as a trolley with a hood.	6AG1067-1AA33-0AA0

- Extended function for an existing memory card (firmware V5.1 SP1 or higher). The memory card is not included in the scope of delivery. The Safety license can also be ordered together with a memory card (see above). With a CoL in electronic form, the license is supplied as a PDF file. Notification of this with a download link is received by email. For further information, see section Supplementary system components > Memory cards.
- The data is applicable for the complete cable length of the motors, whose associated converters are coupled with one another via an AC coupling or through the DC link. The maximum cable length per motor is 25 m using the internal filters or an external filter to achieve EMC category C2. If an external filter is used to achieve EMC category C3, the maximum cable length per motor is 50 m.
- Permissible cables:
 - 16 mm², Class 5 (finely stranded, PVC-insulated) H07V-K + H07V2-K according to EN 50525-2-31
 - HELUTHERM 145: 16 mm², Class 5 (finely stranded, crosslinked polyolefin-copolymer, halogen-free) www.helukabel.com
 - External diameter 6.7 mm to 8.1 mm
 Permissible cables (UL approval):
 - AWG 6, copper cable with PVC insulation, with or without nylon jacket, 19 strands
 - Types: MTW, THHW, THW, THW-2, THHN, THWN-2, TW, TWN
 - CSA types: TW, TWU, TWN75, TW75, TWU75, T90, no compressed conductors
- The prefix "GXK:" is part of a Siemens internal order code that does not belong to the product number of the original manufacturer Michael Koch GmbH.

SINAMICS S210 starter kit

1

Overview

The SINAMICS S210 starter kit with Extended Safety with Article No. 6SL3200-0AE61-0AA0 comprises

- a SINAMICS S210 servo converter, 230 V 1 AC, 400 W (Article No. 6SL3210-5HB10-4UF0)
- a SIMOTICS S-1FK2 servomotor, High Dynamic, shaft height 30, 400 W, without brake, shaft with feather key, with absolute encoder multiturn (Article No. 1FK2103-4AG00-1MA0)
- a corresponding One Cable Connection cable (OCC), 3 m (9.84 ft) (Article No. 6FX5002-8QN04-1AD0)
- a memory card with firmware V5.2 SP3 and Safety license (Extended Functions) (Article No. 6SL3054-4FC30-2BA0-Z F01)

The delivery quantity is limited to three per customer.

The SINAMICS S210 starter kit can be perfectly combined with the SIMATIC S7-1500 starter kit. In this way, Motion Control applications can be quickly and easily implemented.

For more information on SIMATIC S7-1500 starter kits, see: www.siemens.com/s7-1500-starterkits

SINAMICS S210 servo drive

0.1 kW to 7 kW

SINAMICS S210 servo drive

Overview

SINAMICS S210 – the single-axis servo drive for highly dynamic applications

SINAMICS S210, 1 AC series, frame sizes FSA to FSC

SINAMICS S210, 3 AC series, frame sizes FSA to FSC

The SINAMICS S210 servo converter is designed for connection to SIMOTICS S-1FK2, S-1FT2 or S-1FS2 synchronous servomotors. PROFINET RT/IRT is available for connection to a higher-level control system. That allows, above all, SIMATIC S7 and SIMOTION to be used as controllers.

SINAMICS S210 is optimized for operation with SIMATIC S7-1500 and SIMATIC S7-1500T, which have their own positioning functionality. Therefore, no additional basic positioner is integrated into the converter.

The converter works with a servo controller with or without Dynamic Servo Control (DSC) and has a torque setpoint limitation. A wide range of internal protection functions are included to protect the converter.

The status of the converter is indicated by two multi-color LEDs and a 7-segment display. Pending faults can be acknowledged with a button under the front cover.

The converter has a web server, which can be called via the service interface or via PROFINET from a web browser on a PC. Both commissioning and diagnostics can be performed through this. With the web server, the converter can be brought into operation in a few steps. As the motor data from the converter is read from the electronic type plate, they do not need to be parameterized. The PROFIdrive telegram is automatically accepted by the controller; so only the controller parameters have to be adjusted. This is simply done with the One Button Tuning function, which automatically determines the parameters.

In addition to easy commissioning directly via the web server of the converter, engineering is also possible with SINAMICS Startdrive and TIA Portal (as of V15.1). The tool for configuration, commissioning and diagnostics has been optimized with regard to user friendliness and the consistent utilization of the TIA Portal advantages of a shared work environment for PLC, HMI and drives (requires SINAMICS S210 firmware V5.2 or higher).

SIMOTICS S-1FK2, S-1FT2 or S-1FS2 servomotors can be connected and operated via a One Cable Connection (OCC) line. Third-party motors cannot be connected because the converter requires the type plate data of the motor.

No additional components are required for controlling the motor holding brake as all the required components are integrated into the converter. In addition, no special power supply is required because the converter optimally sets the voltage for the brake internally. Thus, in combination with the SIMOTICS S-1FK2, S-1FT2 or S-1FS2 servomotors, shortened opening and closing times of the brakes are also possible.

The converter can be operated optionally with a memory card. The card is inserted in the card slot behind the front cover. Firmware and drive parameters can be stored on the memory card, so that the converter can easily be replaced without any other aids. This memory card can also be used to perform series commissioning on multiple drives of identical type.

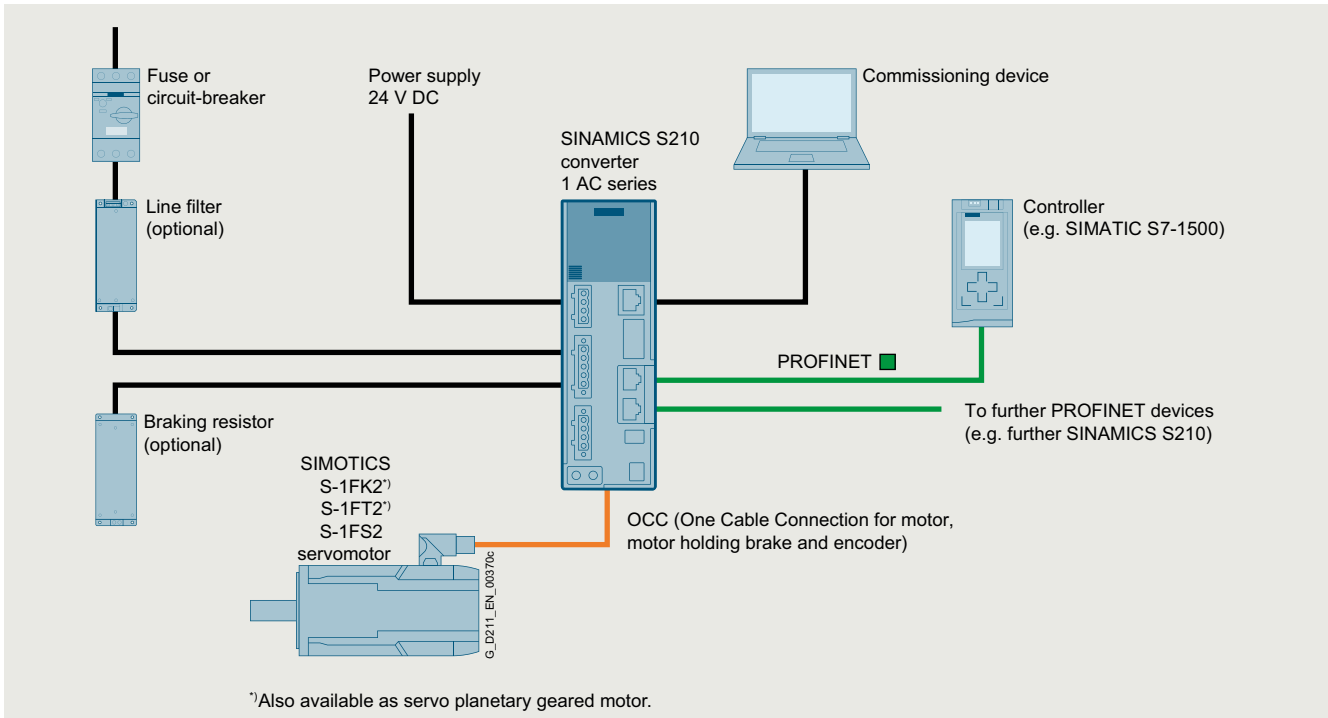

The card is available as an empty memory card or containing the latest drive firmware version. The memory card also contains the licenses for chargeable functions, such as the safety license for the Extended Safety Functions. To use these functions, a memory card containing the corresponding safety license must be permanently inserted.

If necessary, the converter contains an integrated braking resistor. As a result of the generous dimensioning of the resistor and the DC link capacities, an external braking resistor is only necessary to meet very high requirements. When operating a SINAMICS S210 servo converter with a supply voltage of 200 V to 240 V 3 AC, an external, intrinsically safe braking resistor is always required.

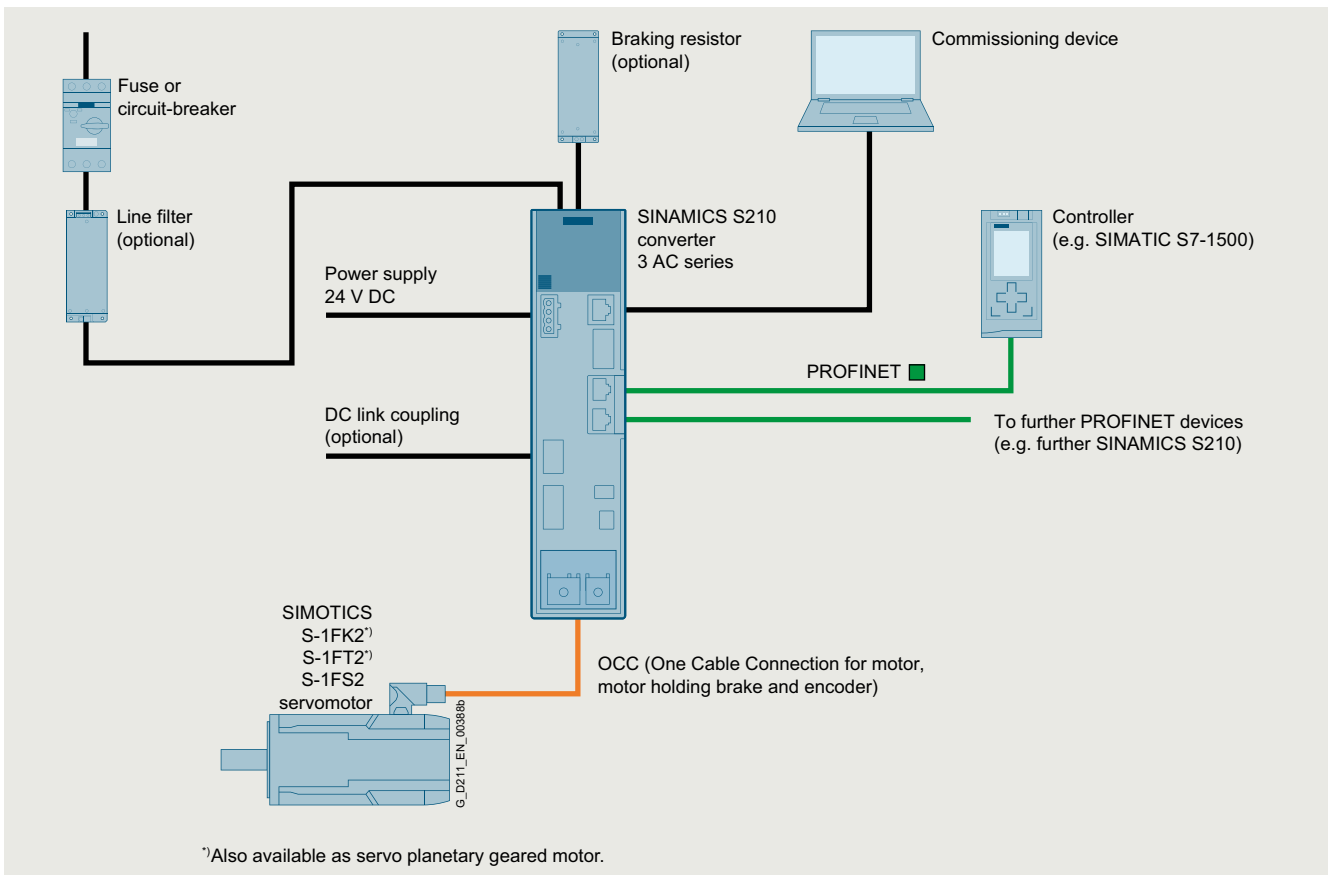

For the 3 AC series, DC link coupling of up to six devices is possible. Thus, the energy that is generated when braking axes can be used for accelerating other axes. This conserves energy and reduces the amount of heat dissipated via the braking resistors.

The converter also features an integrated line filter. For the 1 AC series, it satisfies category C2 for cable lengths up to 10 m and category C3 for cable lengths up to 25 m. With an optional external line filter, cable lengths of up to 25 m are also possible with category C2 and up to 50 m with category C3. For the 3 AC series, category C3 is achieved for cable lengths up to 25 m. For requirements that go beyond this, an external line filter is required.

Overview

SINAMICS S210 drive system, 1 AC series with optional components

SINAMICS S210 drive system, 3 AC series with optional components

SINAMICS S210 servo drive

0.1 kW to 7 kW

SINAMICS S210 servo drive

Design

The single-axis AC/AC converter contains a power unit and a Control Unit for the powerful communication, open and closed-loop control functions.

The SINAMICS S210 servo converter features the following connections and interfaces as standard:

- Fieldbus interface
 - 1 PROFINET interface with two ports (RJ45 sockets) with PROFIdrive V4 profile
- 1 service interface for Ethernet communications with a service PC
- One Cable Connection (OCC)
 - 1 communications connector for communication with the encoder of the SIMOTICS S-1FK2, S-1FT2 or S-1FS2 motors
 - 1 motor power connector for the power conductors of the SIMOTICS S-1FK2, S-1FT2 or S-1FS2 motors
 - 1 brake connection for the conductors of the motor holding brake of the SIMOTICS S-1FK2, S-1FT2 or S-1FS2 motors
- 1 connection for the electronic power supply via the 24 V DC supply connector (supply can be looped through connectors for several SINAMICS S210)
- 1 connection for the line voltage and an external braking resistor (braking resistor optional, for the 3 AC series via a separate connector). When connecting to 200 V to 240 V 3 AC, an external, intrinsically safe braking resistor is always required.
- 1 connection for the DC link coupling (optional, only for the 3 AC series)
- Digital inputs
 - 1 fail-safe digital input (isolated) for controlling STO and SS1-t via terminals
 - 2 high-speed digital inputs for measuring probe or reference marks
 - 1 digital input for monitoring the temperature of an external braking resistor
- 1 slot for a memory card on which the firmware, parameters and licenses can be stored
- 1 display with 3-digit, 7-segment display for indicating faults and two status LEDs
- 1 button for acknowledging errors

DC link coupling (only 3 AC series)

For devices of the 3 AC series, the DC links of up to six converters can be coupled. Thus, energy balancing between the axes is possible and energy produced during braking can be used by other axes for accelerating. This is not only efficient but also reduces the dissipated heat in the control cabinet, because the energy that is produced no longer has to be converted to heat in the braking resistor. For DC link coupling, the line side must also be coupled (AC bus).

Configuration

The following electronic configuring aids and engineering tools are available for the SINAMICS S210 servo converters:

SINAMICS SELECTOR app

Frequency converter selection guide for on the move

Siemens has developed the SINAMICS SELECTOR app as a practical tool for finding article numbers for your SINAMICS converter in the power range from 0.1 kW to 630 kW quickly and easily. Whether for SINAMICS V20, SINAMICS G120C, SINAMICS G120P, SINAMICS G120X, SINAMICS G120 or SINAMICS S210: The app will provide you with the correct article numbers conveniently.

How does it work? Simply select your application, the frequency converter you require, the rated power and device options as well as the necessary accessories.

¹⁾ Available in firmware V5.1 SP1 and higher. The Extended Functions require a Safety license.

Then you can save your selection and send it by email. The preselection serves as the basis for an order specification with the dealer/Siemens.

You will find free downloads for Android and iOS here: www.siemens.com/sinamics-selector

Drive Technology Configurator (DT Configurator)

The Drive Technology Configurator (DT Configurator) helps you to configure the optimum drive technology products for a number of applications – starting with gearboxes, motors, converters as well as the associated options and components and ending with controllers, software licenses and connection systems.

The DT Configurator can be used on the internet without requiring any installation. The DT Configurator can be found in the Siemens Industry Mall at the following address: www.siemens.com/dt-configurator

Drive dimensioning of the SINAMICS S210 servo drive system with the TIA Selection Tool

The SINAMICS S210 servo drive system is easily configured with the TIA Selection Tool under the Drive Dimensioning plug-in. It provides support when selecting the hardware and firmware components necessary to implement a drive task. The plug-in encompasses the configuration of the entire drive system and allows the handling of individual drives.

- Intuitive user interface, menu-based operation and help
- Configuration of the SINAMICS S210 servo drive system
- Adjustable traversing cycles and various mechanical systems integrated for single-axis applications
- Interface to the TIA Portal and Industry Mall

The TIA Selection Tool is available for free on the internet at www.siemens.com/tia-selection-tool-standalone

SINAMICS web server for SINAMICS S210

The converter can be brought easily and quickly into operation and optimized with the web server. Additional software does not need to be installed as access comes directly from a web browser.

You can find further information about the web server for SINAMICS S210 in the Engineering tools section.

SINAMICS Startdrive commissioning tool (TIA Portal)

SINAMICS Startdrive is a tool for configuring, commissioning and diagnosing the SINAMICS converter family that is integrated into TIA Portal (V15.1 or higher).

The SINAMICS Startdrive has been optimized with regard to user friendliness and consistent use of the TIA Portal benefits of a common working environment for PLC, HMI and drives. SINAMICS firmware V5.2 or higher is required for SINAMICS S210.

The SINAMICS Startdrive Advanced license is required for the Safety Integrated acceptance test.

The SINAMICS Startdrive commissioning tool is available free on the internet at www.siemens.com/startdrive

You can find further information on the SINAMICS Startdrive commissioning tool in the section Engineering tools.

¹⁾ Extended function for an existing memory card (firmware V5.1 SP1 or higher). The memory card is not included in the scope of delivery. The Safety license can also be ordered together with a memory card (see above). With a CoL in electronic form, the license is supplied as a PDF file. Notification of this with a download link is received by email. For further information, see section Supplementary system components > Memory cards.

²⁾ The data is applicable for the complete cable length of the motors, whose associated converters are coupled with one another via an AC coupling or through the DC link. The maximum cable length per motor is 25 m using the internal filters or an external filter to achieve EMC category C2. If an external filter is used to achieve EMC category C3, the maximum cable length per motor is 50 m.

³⁾ Permissible cables:

- 16 mm², Class 5 (finely stranded, PVC-insulated) H07V-K + H07V2-K according to EN 50525-2-31
- HELUTHERM 145: 16 mm², Class 5 (finely stranded, crosslinked polyolefin-copolymer, halogen-free) www.helukabel.com
- External diameter 6.7 mm to 8.1 mm

Permissible cables (UL approval):

- AWG 6, copper cable with PVC insulation, with or without nylon jacket, 19 strands
- Types: MTW, THHW, THW, THW-2, THHN, THWN-2, TW, TWN
- CSA types: TW, TWU, TWN75, TW75, TWU75, T90, no compressed conductors

SINAMICS S210 servo drive

0.1 kW to 7 kW

SINAMICS S210 servo drive**Technical specifications**

Unless explicitly specified otherwise, the following technical specifications are valid for all SINAMICS S210 servo converters.

General technical specifications**Mechanical specifications****Vibratory load**

- Transport ¹⁾ acc. to IEC 60721-3-2: 1997
- Operation acc. to IEC 60721-3-3: 2002
 - Test values according to IEC/EN 60068-2-6

Class 2M3
Class 3M2
Test Fc (sinusoidal)

- 2 ... 9 Hz: 1.5 mm deflection amplitude
- 9 ... 200 Hz: 0.5 × g acceleration amplitude
- 10 frequency cycles per axis

Shock load

- Transport ¹⁾ acc. to IEC 60721-3-2: 1997
- Operation acc. to IEC 60721-3-3: 2002
 - Test values according to IEC/EN 60068-2-27

Class 2M3
Class 3M2
Test Ea (semisinusoidal)

- 5 × g peak acceleration
- 30 ms duration
- 3 shocks in all three axes in both directions

Environmental conditions**Protection class**

According to IEC/EN 61800-5-1

Class I (with protective bonding circuit) and class III (PELV or SELV)

Degree of protection

According to IEC/EN 60529

IP20
Mounting in control cabinet necessary**Permissible ambient temperature (air) in operation**

0 ... 50 °C (32 ... 122 °F)

Installation altitude

Up to max. 4000 m (13123 ft) (IEC/EN/UL), up to max. 2000 m (6562 ft) (CSA)

- Up to 1000 m (3281 ft) above sea level without derating
- As from 1000 m (3281 ft) derating 10 % of current or 5 K per 1000 m (3281 ft)
- For 1 AC devices, an isolating transformer is required from 2000 m (6562 ft)

Climatic environmental conditions

- Storage ²⁾ acc. to IEC 60721-3-1: 1997
- Transport ¹⁾ acc. to IEC 60721-3-2: 1997
- Operation acc. to IEC 60721-3-3: 2002

Class 1K4
-25 ... +55 °C (-13 ... +131 °F)

Class 2K4
-40 ... +70 °C (-40 ... +158 °F)
Max. air humidity: 95 % at 40 °C (104 °F)
Better than class 3K3

0 ... 50 °C (32 ... 122 °F)
Relative air humidity: 5 ... 95 %
Condensation, splashwater, and ice formation not permitted (IEC/EN 60204, Part 1)

Environmental class/harmful chemical substances

- Storage ²⁾ acc. to IEC 60721-3-1: 1997
- Transport ¹⁾ acc. to IEC 60721-3-2: 1997
- Operation acc. to IEC 60721-3-3: 2002

Class 1C2
Class 2C2
Class 3C2

Organic/biological influences

- Storage ²⁾ acc. to IEC 60721-3-1: 1997
- Transport ¹⁾ acc. to IEC 60721-3-2: 1997
- Operation acc. to IEC 60721-3-3: 2002

Class 1B2
Class 2B2
Class 3B2

Degree of pollution

According to IEC/EN 61800-5-1

2

Standards**Certificates of suitability**

CE, UKCA, cULus (UL File No. E355661 for 1 AC series, E192450 for 3 AC series), RCM, EAC, KC

Functional safety

- SIL 2 according to IEC 61508 parts 1 to 3 (2010) and IEC 61800-5-2 (2016)
- PL d according to ISO 13849 part 1 (2015)
- Category 3 according to ISO 13849 part 1 (2015)

¹⁾ In transport packaging.

0.1 kW to 7 kW

SINAMICS S210 servo drive

Accessories

Line filters

1 AC series

Filters are already integrated in order to achieve category C2 (for motor cable lengths up to 10 m) or category C3 (for motor cable lengths up to 25 m). Further requirements can be achieved using an external line filter.

1 AC series	Maximum motor cable length	
	for converters <u>without</u> additional line filter	for converters <u>with</u> external line filter
EMC category C2	10 m (32.8 ft)	25 m (82.0 ft)
EMC category C3	25 m (82.0 ft)	50 m (164 ft)

3 AC series

Filters for achieving category C3 are already integrated (for motor cable lengths up to 25 m). Further requirements can be achieved using an external line filter.

3 AC series	Line/DC link coupling	Maximum motor cable length	
		for converters with <u>integrated</u> line filter	for converters with <u>external</u> line filter
EMC category C2	Without line/DC link coupling	–	25 m (82 ft)
	With line/DC link coupling ≤ 6 converters ¹⁾	–	100 m (328 ft)
EMC category C3	Without line/DC link coupling	25 m (82 ft)	50 m (164 ft)
	With line/DC link coupling ≤ 6 converters ¹⁾	100 m (328 ft)	250 m (820 ft)

Example: SINAMICS S210, 3 AC line filter with servo converter, frame size FSB

Recommended line-side overcurrent protection devices

Overcurrent protection devices are absolutely necessary for the operation of the converters. The table listed in the section "Recommended line-side overcurrent protection devices" provides recommendations according to IEC and UL regulations, depending on the area of application. Recommendations on further overcurrent protection devices are available at: <https://support.industry.siemens.com/cs/document/109748999>

Additional information about the listed Siemens fuses is available in Catalog LV 10 as well as in the Industry Mall.

Braking resistors

As far as necessary, braking resistors are integrated into the converters. Together with the generously dimensioned DC link capacities, an external braking resistor is not necessary in the normal case.

If the internal braking resistor is inadequate for applications with very high requirements, an external braking resistor can be connected as an alternative. When operating a SINAMICS S210 servo converter with a supply voltage of 200 V to 240 V 3 AC, an external, intrinsically safe braking resistor is always required.

Memory cards

A memory card (SINAMICS SD card) can be optionally used with SINAMICS S210. The associated slot is located under the front cover of the converter. Not only the firmware but also the device parameterization of a SINAMICS S210 servo converter can be stored on the memory card.

When service is required, e.g. after the converter has been replaced and the data have been downloaded from the memory card, the drive system is immediately ready for use again.

A memory card is only absolutely necessary if functions requiring license, such as the Extended Safety Functions, are used. The necessary license is saved on the memory card.

¹⁾ The data is applicable for the complete cable length of the motors, whose associated converters are coupled with one another via an AC coupling or through the DC link.
The maximum cable length per motor is 25 m using the internal filters or an external filter to achieve EMC category C2. If an external filter is used to achieve EMC category C3, the maximum cable length per motor is 50 m.

Overview

1 AC line filter, 18 A

3 AC line filter, 35 A and 65 A

The 3 AC line filters are connected via the AC coupling of the converters.

The total of the rated currents of the converters on an AC bus must not exceed the rated current of the line filter.

SINAMICS S210 servo drive

0.1 kW to 7 kW

Line-side components > Recommended line-side overcurrent protection devices

Selection and ordering data

Overcurrent protection devices are absolutely necessary for the operation of the converters. The following table lists recommendations for fuses.

- Siemens fuses of type 3NA3 for use in the area of validity of IEC
- UL-listed fuses Class J for use in USA and Canada

Recommendations on further overcurrent protection devices are available at:

<https://support.industry.siemens.com/cs/document/109748999>

The Short Circuit Current Rating (SCCR) according to UL for industrial control cabinet installations to NEC Article 409 or UL 508A/508C or UL 61800-5-1 is as follows for Class J fuses for

- SINAMICS S210: 65 kA

SCCR and ICC values for combination with further overcurrent protection devices are available at:

<https://support.industry.siemens.com/cs/document/109748999>

Notes for installations in Canada:

The converters are intended for line supply systems with overvoltage category III.

More information is available in the technical documentation on the internet at:

www.siemens.com/sinamics-s210/documentation

Additional information about the listed Siemens fuses is available in Catalog LV 10 as well as in the Industry Mall.

Group protection of multiple converters

Further information is available in the technical documentation on the internet at:

www.siemens.com/sinamics-s210/documentation

<https://support.industry.siemens.com/cs/document/109748999>

Overview

As far as necessary, braking resistors are integrated into the converters. Together with the generously dimensioned DC link capacities, another external braking resistor is not necessary in the normal case.

If the internal braking resistor is inadequate for applications with very high requirements, an external braking resistor can be connected as an alternative.

Only intrinsically safe braking resistors with temperature monitoring may be used in order to minimize the risk of an explosion, the outbreak of fire or melting of the enclosure in the event of a continuous overload, e.g. due to a defect.

External braking resistors for 200 V to 240 V 3 AC

For operation with a supply voltage of 200 V to 240 V 3 AC, an external, intrinsically safe braking resistor is always required for each converter. Use of braking resistors integrated in the converter is not permissible with this supply voltage.

The following resistors are recommended as a substitute for the internal braking resistors. If these are not sufficient, the resistors from Michael Koch GmbH listed in the table can be used.

- 100 W, 47 Ω for frame sizes FSA and FSB:
GXK:BWG250047TS-190
- 240 W, 14 Ω for frame size FSC:
GXK:BWG600014TS-190

These resistors have approvals for the North American market (cURus and CSA).

If the temperature sensor of the resistor is connected to the input DI4 of the converter, the converter switches off when the braking resistor is overloaded.

More Information

Further information is available from the "Siemens Product Partner for Drives Options":
www.siemens.com/drives-options-partner

SINAMICS S210 servo drive

0.1 kW to 7 kW

Supplementary system components > Memory cards**Overview**

SINAMICS memory card (SD card)

The parameter assignment, firmware and licenses for a converter can be stored on the SINAMICS memory card (SD card). When service is required, e.g. after the converter has been replaced and the data have been downloaded from the memory card the drive system is immediately ready for use again.

The memory card has the following functions:

- Parameter settings can be written from the memory card to the converter or saved from the converter to the memory card
- The memory card supports series commissioning without the use of a commissioning tool
- If firmware is stored on the memory card, the firmware can be upgraded/downgraded during startup
- It is used for storing licenses when using functions under license, e.g. the license for enabling the Extended Safety Functions
 - Safe Stop 1 (SS1) ¹⁾
 - Safe Stop 2 (SS2)
 - Safe Operating Stop (SOS)
 - Safely-Limited Speed (SLS)
 - Safe Speed Monitor (SSM)
 - Safe Direction (SDI)
 - Safely-Limited Acceleration (SLA)
 - Safe Brake Test (SBT) diagnostic function

Notes:

In general, the converter can be operated without a memory card. However, it is necessary if licenses, such as the Extended Safety license, are required. The card must then remain permanently inserted.

Firmware V5.2 or higher is required for the 3 AC series or when using the SINAMICS Startdrive commissioning tool.

Selection and ordering data

Description	Article No.
SINAMICS SD card 512 MB Firmware V5.2 or higher is required for the 3 AC series.	
• Empty	6SL3054-4AG00-2AA0
• With firmware V5.1	6SL3054-4FB00-2BA0
• With firmware V5.1 SP1	6SL3054-4FB10-2BA0
• With firmware V5.1 SP1 and Safety license (Extended Functions)	6SL3054-4FB10-2BA0-Z F01
• With firmware V5.2	6SL3054-4FC00-2BA0
• With firmware V5.2 and Safety license (Extended Functions)	6SL3054-4FC00-2BA0-Z F01
• With firmware V5.2 SP3	6SL3054-4FC30-2BA0
• With firmware V5.2 SP3 and Safety license (Extended Functions)	6SL3054-4FC30-2BA0-Z F01
Safety license (Extended Functions) ²⁾	
• CoL in paper form	6SL3074-0AA10-0AA0
• CoL in electronic form	6SL3074-0AA10-0AH0

¹⁾ Safe Stop 1 time controlled (SS1-t) is also included in the Safety Integrated Basic functions.

²⁾ Extended function for an existing memory card (firmware V5.1 SP1 or higher). The memory card is not included in the scope of delivery. The Safety license can also be ordered together with a memory card (see above). With a CoL in electronic form, the license is supplied as a PDF file. Notification of this with a download link is received by email. For further information to CoL in electronic form, see next page. For further information to CoL, see section Software licenses.

More information

Certificate of License (CoL)

The CoL is the licensee's proof that the use of the software has been licensed by Siemens. A CoL must be assigned to each use and must be kept in a safe place.

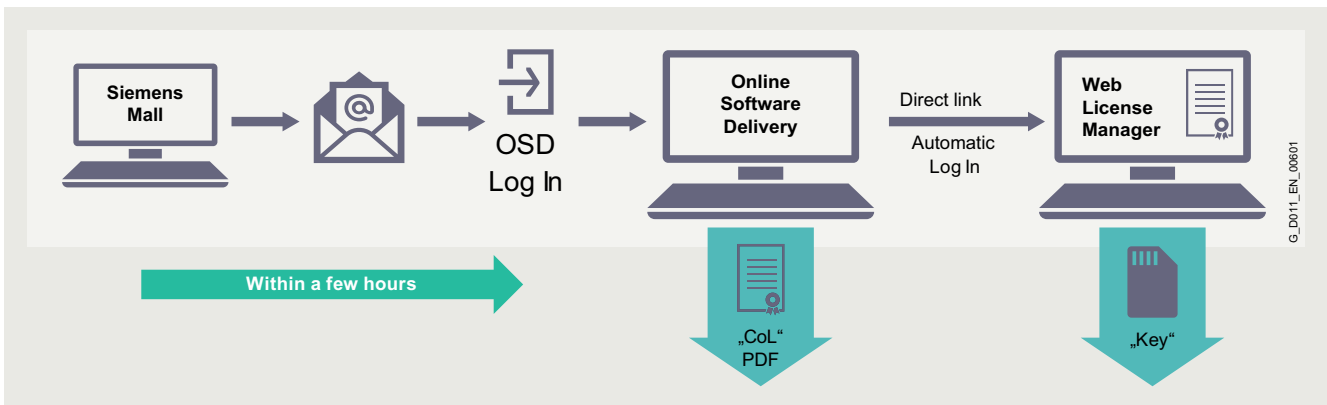

Electronic Certificate of License

The electronic Certificate of License is the paperless delivery form for runtime options for SINAMICS, SIMOTION, and SINUMERIK.

Like the previous paper Certificate of License CoL, the electronic Certificate of License contains information about the type of rights of use purchased for the software. The electronic Certificate of License is supplied as a PDF file via the Online Software Delivery Portal (OSD). This enables quick notification with a download link to the email address to be stated in the order.

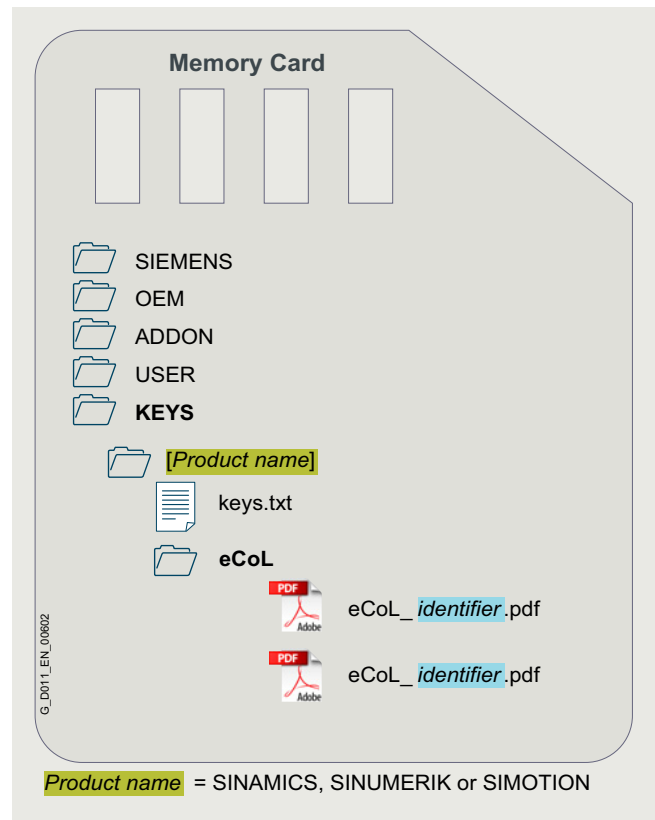

The electronic Certificate of License can then be downloaded from the OSD. The Web License Manager can also be called from the OSD to assign the runtime license to a memory card. In this case, the data of the electronic Certificate of License are automatically transferred to the Web License Manager and do not have to be entered manually. This ensures quick availability of the license key and simple and secure handling and management of the license certificates.

You will find information on the OSD at:
<https://support.industry.siemens.com/cs/document/109759444>

Electronic Certificate of License: Procedure for order licenses

In the future, the pre-licensed memory cards will also be delivered with the corresponding electronic Certificates of License on the memory card. The Certificates of License are stored in directory "KEYS". The pre-licensed memory cards will successively make the transition from paper CoLs to electronic CoLs. The CoL on paper will then no longer be contained in the delivery.

Electronic Certificate of License: Storage location on data medium

SIMOTICS S-1FK2 servomotors for SINAMICS S210

Overview

The SIMOTICS S-1FK2 servomotors are compact and highly dynamic synchronous motors for a wide range of uses in an industrial environment. They are characterized by high power density, degree of protection and overload capability.

SIMOTICS S-1FK2 High Dynamic motors

Highest dynamic response through low inertia for highly dynamic applications with low moved masses.

SIMOTICS S-1FK2 Compact motors

Precise, stable control with medium to high masses to be moved with medium moment of inertia.

Benefits

The SIMOTICS S-1FK2 servomotors fully exploit their strengths in the system with the SINAMICS S210 converter:

- Short adjustment and positioning times
- Quick and precise compensation of disturbances
- Stable closed loop control with high dynamic response

This is achieved by:

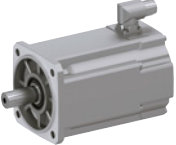

- Rapid control cycle
- High pulse frequency
- Complex rule algorithms
- High-resolution optical encoder with fast scanning
- Low moment of inertia of the motors
- High overload capability

Application

- Packaging machines
- Handling equipment
- Feed and withdrawal devices
- Stacking units
- Automatic assembly machines
- Laboratory automation
- Woodworking, glass and ceramic industries
- Digital printing machines

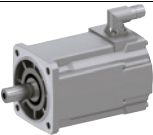

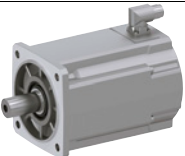

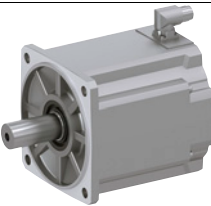

SIMOTICS S-1FK2 servomotors for SINAMICS S210

Technical specifications

General technical specifications

SIMOTICS S-1FK2 High Dynamic/Compact motors	
Motor type	Permanent-magnet synchronous motor
Permissible operating conditions without derating • Ambient temperature • Installation altitude, max.	-15 ... +40 °C (5 ... 104 °F) 1000 m (3281 ft)
Degree of protection According to EN 60034-5 (IEC 60034-5)	IP64 IP65 optional or retrofittable
Cooling According to EN 60034-6	Natural cooling (IC410)
Type of construction According to EN 60034-7 (IEC 60034-7)	IM B5 (IM V1, IM V3)
Shaft extension According to DIN 748-3 (IEC 60072-1)	Plain shaft Optional shaft with feather key (half-key balancing)
Shaft and flange accuracy According to DIN 42955 (IEC 60072-1)	Tolerance N In each case for radial eccentricity of the shaft extension, concentricity of the centering ring, and axial eccentricity of the mounting flange to the axis of the shaft extension.
Vibration severity grade According to EN 60034-14 (IEC 60034-14)	Grade A is maintained up to rated speed
Stator winding insulation According to EN 60034-1 (IEC 60034-1) • 1FK2102, 1FK2.03 • 1FK2.04, 1FK2.05, 1FK2.06, 1FK2.08, 1FK2.10	Thermal class 130 (B) for a winding overtemperature of $\Delta T = 80$ K Thermal class 155 (F) for a winding overtemperature of $\Delta T = 100$ K
Sound pressure level L_{pA} (1 m), max. According to ISO 1680 • 1FK2102, 1FK2.03, 1FK2.04 • 1FK2.05 and 1FK2.06 • 1FK2.08 and 1FK2.10	55 dB(A) + 3 dB(A) tolerance 65 dB(A) + 3 dB(A) tolerance 70 dB(A) + 3 dB(A) tolerance
Encoder system	• AS22DQC (absolute encoder 22-bit singleturn) • AM22DQC (absolute encoder 22-bit + 12-bit multiturn)
Holding brake	Optional integrated holding brake
Connection	One Cable Connection (OCC) for signals and power Rotatable connector
Paint finish	RAL 7016 (anthracite gray)
Certificates of suitability	cURus, CE

Technical specifications

Regulations, standards, specifications

The motors comply with the appropriate standards and regulations, see table below.

As a result of the fact that in many countries the national regulations have been completely harmonized with the international IEC 60034-1 recommendation, there are no longer any differences with respect to coolant temperatures, temperature classes and temperature rise limits.

General specifications for rotating electrical machines	IEC 60034-1
Terminal designations and direction of rotation for electrical machines	IEC 60034-8
Types of construction of rotating electrical machines	IEC 60034-7
Cooling methods of rotating electrical machines	IEC 60034-6
Degrees of protection of rotating electrical machines	IEC 60034-5
Vibration severity of rotating electrical machines	IEC 60034-14
Noise limit values for rotating electrical machines	IEC 60034-9
Cylindrical shaft extensions for electrical machines	DIN 748-3/IEC 60072-1

SIMOTICS S-1FK2 motors have UL approval from Underwriters Laboratories Inc. and are marked with the "UL Recognized Component" test symbol. This is used for components which are part of a larger product or system. This confirmed compliance with the corresponding US American and Canadian regulations, and allowed access to the North American market.

For SIMOTICS S-1FK2 motors, conformity with the relevant EC directives 2006/95/EC and 2014/35/EU and the relevant standards EN 60034-1:2010 and EN 60204-1:2006 is confirmed. By applying the CE mark to the product, Siemens AG confirms this for the product, and secures the free movement of goods within the European Union.

Degree of protection acc. to IEC 60034-5

A suitable degree of protection must be selected according to the operating and environmental conditions to protect the machine against damage caused by the ingress of water and other liquids, as well as dust and foreign bodies.

SIMOTICS S-1FK2 motors have degree of protection IP64 as standard.

The motor can be optionally supplied with a radial shaft seal ring in degree of protection IP65. This increases the protection against the ingress of liquids.

The degree of protection designation is composed from the code **IP** (for International Protection) and two code numbers for the protection against touching and penetration of foreign bodies, and the degree of protection against the ingress of water.

First code number

6: Protection against dust ingress and complete protection against touching

Second code number

4: Protection against splashwater from any direction

5: Protection against jet water from any direction

Recommended degrees of protection for AC motors

When cooling lubricants are used, protection against water alone is inadequate. The IP rating should only be considered as a guide value in this case. The motors may have to be protected by suitable covers. Attention must be paid to providing suitable sealing of the motor shaft for the selected degree of protection for the motor.

The following table can serve as a decision aid for selecting the proper degree of protection for motors. A permanent covering of liquid on the flange must be avoided when the motor is mounted with the shaft extension facing upwards (IM V3).

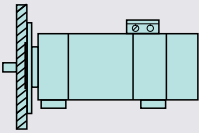

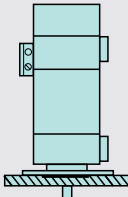

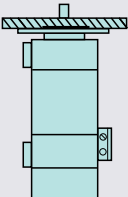

Effect	General workshop environment	Water/general cooling lubricant (95 % water, 5 % oil)
Dry	IP64	–
Water-enriched environment	–	IP64
Mist	–	IP65
Spray	–	IP65

SIMOTICS S-1FK2 servomotors for SINAMICS S210

Technical specifications

Type of construction, mounting position according to IEC 60034-7

SIMOTICS S-1FK2 motors are designed in type of construction IM B5. It can also be used in mounting positions IM V1 and IM V3.

Code 1	IM B5	IM V1	IM V3
Code 2	IM 3001	IM 3011	IM 3031
			
	Horizontal flange mounting	Flange mounting, output shaft pointing vertically downwards	Flange mounting, output shaft pointing vertically upwards

Shaft and flange accuracy in accordance with IEC 60072-1

Radial eccentricity tolerance of shaft in relation to housing axis

(referred to cylindrical shaft extensions)

Motor	Shaft extensions D × L	Radial eccentricity Tolerance N
	mm (in)	
1FK2102	8 × 25 (0.31 × 0.98)	30
1FK2.03	14 × 30 (0.55 × 1.18)	35
	11 × 23 (0.43 × 0.91)	35
1FK2.04	19 × 40 (0.75 × 1.57)	40
	14 × 30 (0.55 × 1.18)	35
1FK2.05	19 × 40 (0.75 × 1.57)	40
1FK2.06	24 × 50 (0.94 × 1.97)	40
1FK2208	32 × 58 (1.26 × 2.28)	50
1FK2210	38 × 80 (1.50 × 3.15)	50

Concentricity and axial eccentricity tolerance of the flange surface for the shaft axis

(referred to the centering diameter of the mounting flange)

Motor	Centering diameter	Concentricity and axial eccentricity Tolerance N
	mm (in)	
1FK2102	30 (1.18)	80
1FK2.03	50 (1.97)

1FK2205	80 (3.15)	
1FK2105	95 (3.74)	
1FK2.06	110 (4.33)	
1FK2208	130 (5.12)	
1FK2210	130 (5.12)	

Technical specifications

Vibration severity and vibration severity grade A according to IEC 60034-14

The vibration severity is the RMS value of the vibration velocity (frequency range from 10 Hz to 1000 Hz). The vibration severity is measured using electrical measuring devices according to DIN 45666.

The specified values refer only to the motor. These values can increase as a result of the overall system vibrational behavior due to installation.

Vibration severity limit values

The speeds of 1800 rpm and 3600 rpm and the associated limit values are specified according to IEC 60034-14. The speeds of 4500 rpm and 6000 rpm and the specified values are defined by the motor manufacturer.

The motors maintain vibration severity grade A up to the rated speed.

Balancing according to ISO 21940-32

Apart from the balance quality of the motor, the vibrational quality of motors with attached pulleys is mainly determined by the balance state of the mounted component. If the motor and the mounted component are balanced separately before being joined, the balancing process of the pulley is to be adapted to the motor's balancing type.

SIMOTICS S-1FK2 motors with feather keys are always half-key balanced. In general, motors with a plain shaft are recommended for systems with the most stringent vibrational quality requirements.

Vibration stress, immitted vibration values

The requirements of environmental class 3M8 (according to EN 60721-3-3 Table 6) must be maintained for proper function and safeguard the bearing life. The following limits are valid for (immitted) vibration values introduced into the motor from outside:

- Vibration velocity V_{rms} according to ISO 10816, max. 4.5 mm/s (0.18 in/s)
- Vibration acceleration a_{peak} axial and radial 50 m/s² (164 ft/s²)

During transport, the motors withstand single shocks (6 ms) of up to 250 m/s² (820 ft/s²).

Ambient temperature and installation altitude

Operating range without restrictions:

Temperature range from -15 °C to +40 °C (5.0 °F to 104 °F), installation altitude up to 1000 m (3281 ft).

If deviating conditions are encountered, the S1 characteristic of the motor must be adapted with regard to speed and torque.

Use the following equation to calculate the reduced S1 characteristic:

$$S1_{red}(n) = x_D \times S1_{40^\circ C; 1000m}(n/x_D)$$

Installation altitude above sea level m (ft)	Derating factor x_D at an ambient temperature of					
	5 °C (41 °F)	10 °C (50 °F)	20 °C (68 °F)	30 °C (86 °F)	40 °C (104 °F)	50 °C (122 °F)
1000 (3281)	1.16	1.14	1.1	1.05	1	0.91
2000 (6562)	1.12	1.1	1.05	1	0.95	0.84

Encoder systems

In motors with integrated OCC/DRIVE-CLiQ interface, the sensor signal is already digitally prepared in the motor, and then transferred quickly and without loss to the drive system. Motors with an OCC/DRIVE-CLiQ interface simplify commissioning and diagnostics, as the motor parameters and encoder system are identified automatically.

Single-turn absolute encoder

This encoder outputs an absolute angular position between 0° and 360° in the specified resolution. In contrast to the multi-turn absolute encoder, it does not have a revolution counter, and can therefore only supply the position value within one revolution. It does not have a traversing range.

Multi-turn absolute encoder

This encoder outputs an absolute angular position between 0° and 360° in the specified resolution. It can also count 4096 revolutions. So with a ball screw, for example, the absolute position of the slide can be determined over a longer distance.

14th position in the Article No. of the motor	Designation	
1FK2...-...- S ..	AS22DQC	Absolute encoder 22-bit singleturn (resolution 4194304)
1FK2...-...- M ..	AM22DQC	Absolute encoder 22-bit + 12-bit multiturn (resolution 4194304, traversing range 4096 revolutions)

SIMOTICS S-1FK2 servomotors for SINAMICS S210

Technical specifications

Holding brake

Many drives need a holding brake with an EMERGENCY STOP function for safety reasons or to meet process requirements. The brakes used on the SIMOTICS S-1FK2 motors function according to the closed-circuit principle. A spring or permanent magnet exerts a tensile force on the brake armature disk, i.e. in a state of zero current, the brake is closed and the motor shaft thereby stopped.

An electric current that flows through a coil generates an opposing field that counteracts the force effect of the spring or permanent magnet and releases or holds open the brake. Only a limited number of braking operations can be performed for an EMERGENCY STOP or power failure without causing excessive wear on the holding brake. The holding brake is not an operational brake. Regular dynamic braking leads to increased wear and premature brake failure. In order to ensure the functionality

and specification of the brake, neither the total operating energy nor the maximum switching energy per braking operation may be exceeded.

The braking signal is already fully integrated into the SINAMICS S210 converter system, so that an external circuit is not necessary.

After an EMERGENCY STOP sequence with the maximum single switching energy, a cooling time of at least 5 minutes must be allowed.

The following table shows the technical specifications of the holding brakes for operation with SINAMICS S210 (for 1 AC devices, hardware version 2 or higher) and firmware V5.2 or higher.

Motor	Shaft height	Holding torque Nm (lb _r -ft)	Average dynamic braking torque Nm (lb _r -ft)	Maximum dynamic braking torque Nm (lb _r -ft)	Opening time ms	Closing time ms	Maximum permissible single switching energy J	Total operating energy (service life) kJ	Holding current A	Break-induced current, typ. ¹⁾ for 500 ms A

Detailed technical information on the SINAMICS S210 servo drive system is available on the internet at:

www.siemens.com/sinamics-s210/documentation

In addition, the Drive Technology Configurator (DT Configurator) can be used on the internet at the following address:

www.siemens.com/sinamics-s210/configuration

SIMOTICS S-1FT2 servomotors for SINAMICS S210

Overview

The SIMOTICS S-1FT2 servomotors are compact and highly dynamic synchronous motors for a wide range of uses in an industrial environment. They are characterized by high power density, degree of protection and overload capability.

SIMOTICS S-1FT2 High Dynamic motors

Highest dynamic response through low inertia for highly dynamic applications with low moved masses.

SIMOTICS S-1FT2 Compact motors

Precise, stable control with medium to high masses to be moved with medium moment of inertia.

Benefits

The SIMOTICS S-1FT2 servomotors fully exploit their strengths in the system with the SINAMICS S210 converter:

- Short adjustment and positioning times
- Quick and precise compensation of disturbances
- Stable closed loop control with high dynamic response
- Highest flexibility during selection
- More rugged
- Best accuracy

This is achieved by:

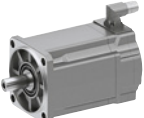

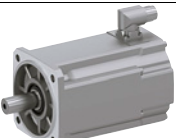

- Rapid control cycle
- High pulse frequency
- Complex rule algorithms
- Highest resolution optical encoder
- Low moment of inertia of the motors
- High overload capability

Application

- Packaging machines
- Handling equipment
- Feed and withdrawal devices
- Stacking units
- Automatic assembly machines
- Laboratory automation
- Woodworking, glass and ceramic industries
- Digital printing machines

SIMOTICS S-1FT2 servomotors for SINAMICS S210

Options

For one or more options, the Article No. of the motor must be supplemented with “-Z” and the order code.

Article No. of the motor	Article No. supplement
1FT2 A A . -Z	Order code
Increased detergent resistance	N16
Pressure balance ¹⁾	Q20
Metal rating plate instead of adhesive label ²⁾	Q31
Paint system with primer	K23
Color	
• Jet black, mat	X01
• Cream white	X02
• Reseda green	X03
• Pebble gray	X04
• Sky blue	X05
• Light ivory	X06
• White aluminum	X08
Customer-specific text on rating plate ³⁾	Y84

Example:

**1FT2104-4AF00-1SA0-Z
N16+Q31+X03**

Increased detergent resistance

1FT2 motors are available with increased chemical resistance with order code **N16**.

The standard color is anthracite gray – can be combined with the colors according to order codes **X01** to **X08**.

Additional properties:

- 4-layer paint system (PS Premium paint system)
- Nickel-plated plug connectors

Motor applications:

Plants and systems in the foodstuff industry are typical applications for these types of versions. The paint system for these motors is resistant to a wide range of common cleaning and disinfecting agents.

Note:

More information on the resistance to the cleaning and disinfecting agents is available at:

<https://support.industry.siemens.com/cs/document/58657336>

Pressure balance ¹⁾

Motors are provided with a connection to the pressure balance with order code **Q20**.

Metal rating plate instead of adhesive label ²⁾

The regular rating plate of the motor is a plastic adhesive label. A metal rating plate of aluminum can be ordered using order code **Q31**. The labeling is lasered on. This ensures legibility for a long time even under poor environmental conditions.

Coating color

If a color other than RAL 7016 (anthracite gray) is desired, this must be indicated by specifying the following order codes.

Color	RAL	Order code
Jet black, mat	9005	X01
Cream white	9001	X02
Reseda green	6011	X03
Pebble gray	7032	X04
Sky blue	5015	X05
Light ivory	1015	X06
White aluminum	9006	X08

Customer-specific text on rating plate ³⁾

Supplementary data (maximum of 20 characters) can be indicated on the rating plate and on the packaging label using order code **Y84**.

¹⁾ Not available for shaft heights 20 and 30.

²⁾ Not available for shaft height 20.

³⁾ Order code **Y84** requires a plain text with the order.

Holding brake	Optional integrated holding brake
Connection	One Cable Connection (OCC) for signals and power Rotatable connector
Coating color	RAL 7016 (anthracite gray) See Options for more colors
Certificates of suitability	cURus, CE, EAC, CEL

SIMOTICS S-1FT2 servomotors for SINAMICS S210

Technical specifications

Regulations, standards, specifications

The motors comply with the appropriate standards and regulations, see table below.

As a result of the fact that in many countries the national regulations have been completely harmonized with the international IEC 60034-1 recommendation, there are no longer any differences with respect to coolant temperatures, temperature classes and temperature rise limits.

General specifications for rotating electrical machines	IEC 60034-1
Terminal designations and direction of rotation for electrical machines	IEC 60034-8
Types of construction of rotating electrical machines	IEC 60034-7
Cooling methods of rotating electrical machines	IEC 60034-6
Degrees of protection of rotating electrical machines	IEC 60034-5
Vibration severity of rotating electrical machines	IEC 60034-14
Noise limit values for rotating electrical machines	IEC 60034-9
Cylindrical shaft extensions for electrical machines	DIN 748-3/IEC 60072-1

SIMOTICS S-1FT2 motors have UL approval from Underwriters Laboratories Inc. and are marked with the "UL Recognized Component" test symbol. This is used for components which are part of a larger product or system. This confirmed compliance with the corresponding US American and Canadian regulations, and allowed access to the North American market.

For SIMOTICS S-1FT2 motors, conformity with the relevant EC directives 2006/95/EC and 2014/35/EU and the relevant standards EN 60034-1:2010 and EN 60204-1:2006 is confirmed. By applying the CE mark to the product, Siemens AG confirms this for the product, and secures the free movement of goods within the European Union.

Degree of protection acc. to IEC 60034-5

A suitable degree of protection must be selected according to the operating and environmental conditions to protect the motor against damage caused by the ingress of water and other liquids, as well as dust and foreign bodies.

SIMOTICS S-1FT2 motors have degree of protection IP64 as standard.

The motor can be optionally supplied with a radial shaft seal ring with degree of protection IP65. This increases the protection against the ingress of liquids.

Contrary to degree of protection IP65, degree of protection IP67 has increased protection against jet and splashing water as well as brief immersion. The mounting position of the motor must be chosen so that the stagnant water at the shaft exit is avoided.

The degree of protection designation is composed from the code **IP** (for International Protection) and two code numbers for the protection against touching and penetration of foreign bodies, and the degree of protection against the ingress of water.

First code number

6: Protection against dust ingress and complete protection against touching

Second code number

4: Protection against splashwater from any direction

5: Protection against jet water from any direction

7: Protection against brief immersion

Recommended degrees of protection for three-phase motors

When cooling lubricants are used, protection against water alone is inadequate. The IP rating should only be considered as a guide value in this case. The motors may have to be protected by suitable covers. Attention must be paid to providing suitable sealing of the motor shaft for the selected degree of protection for the motor.

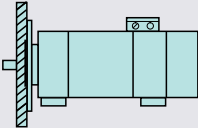

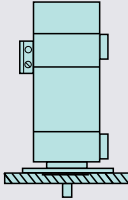

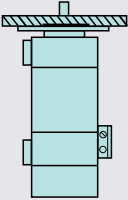

The following table can serve as a decision aid for selecting the proper degree of protection for motors. A permanent covering of liquid on the flange must be avoided when the motor is mounted with the shaft extension facing upwards (IM V3).

Effect	General workshop environment	Water/ general cooling lubricant (95 % water, 5 % oil)
Dry	IP64	–
Water-enriched environment	–	IP64
Mist	–	IP65
Spraying water	–	IP65
Water jet	–	IP67
Splash/brief immersion/ constant inundation	–	IP67

Technical specifications

Design format, mounting position according to IEC 60034-7

SIMOTICS S-1FT2 motors are designed in type of construction IM B5. It can also be used in mounting positions IM V1 and IM V3.

Code 1	IM B5	IM V1	IM V3
Code 2	IM 3001	IM 3011	IM 3031
			
	Horizontal flange mounting	Flange mounting, output shaft pointing vertically downwards	Flange mounting, output shaft pointing vertically upwards

Shaft and flange accuracy in accordance with IEC 60072-1

Radial eccentricity tolerance of shaft in relation to housing axis

(referred to cylindrical shaft extensions)

Motor	Shaft extensions D × L	Radial eccentricity Tolerance N
	mm (in)	µm

1FT2210	130 (5.12)	

SIMOTICS S-1FT2 servomotors for SINAMICS S210

Technical specifications

Vibration severity and vibration severity grade A according to IEC 60034-14

The vibration severity is the RMS value of the vibration velocity (frequency range from 10 Hz to 1000 Hz). The vibration severity is measured using electrical measuring devices according to DIN 45666.

The specified values refer only to the motor. These values can increase as a result of the overall system vibrational behavior due to installation.

Vibration severity limit values

The speeds of 1800 rpm and 3600 rpm and the associated limit values are specified according to IEC 60034-14.

The speeds of 4500 rpm and 6000 rpm and the specified values are defined by the motor manufacturer.

The motors maintain vibration severity grade A up to the rated speed.

Balancing according to ISO 21940-32

Apart from the balance quality of the motor, the vibrational quality of motors with attached pulleys is mainly determined by the balance state of the mounted component. If the motor and the mounted component are balanced separately before being joined, the balancing process of the pulley is to be adapted to the motor's balancing type.

SIMOTICS S-1FT2 motors with feather keys are always half-key balanced. In general, motors with a plain shaft are recommended for systems with the most stringent vibrational quality requirements.

Vibration stress, immitted vibration values

The requirements of environmental class 3M8 (according to EN 60721-3-3 Table 6) must be maintained for proper function and safeguard the bearing life. The following limits are valid for (immitted) vibration values introduced into the motor from outside:

- Vibration velocity V_{rms} according to ISO 10816, max. 4.5 mm/s (0.18 in/s)
- Vibration acceleration a_{peak} axial and radial 50 m/s² (164 ft/s²)

During transport, the motors withstand single shocks (6 ms) of up to 250 m/s² (820 ft/s²).

Ambient temperature and installation altitude

Operating range without restrictions:

Temperature range from -15 °C to +40 °C (5.0 °F to 104 °F), installation altitude up to 1000 m (3281 ft).

If deviating conditions are encountered, the S1 characteristic of the motor must be adapted with regard to speed and torque.

Use the following equation to calculate the reduced S1 characteristic:

$$S1_{red}(n) = x_D \times S1_{40^\circ C; 1000m}(n/x_D)$$

Installation altitude above sea level m (ft)	Derating factor x_D at an ambient temperature of					
	5 °C (41 °F)	10 °C (50 °F)	20 °C (68 °F)	30 °C (86 °F)	40 °C (104 °F)	50 °C (122 °F)
1000 (3281)	1.16	1.14	1.1	1.05	1	0.91
2000 (6562)	1.12	1.1	1.05	1	0.95	0.84

Encoder systems

In motors with integrated OCC/DRIVE-CLiQ interface, the sensor signal is already digitally prepared in the motor, and then transferred quickly and without loss to the drive system. Motors with an OCC/DRIVE-CLiQ interface simplify commissioning and diagnostics, as the motor parameters and encoder system are identified automatically.

Singleturn absolute encoder

This encoder outputs an absolute angular position between 0° and 360° in the specified resolution. In contrast to the multi-turn absolute encoder, it does not have a revolution counter, and can therefore only supply the position value within one revolution. It does not have a traversing range.

Multiturn absolute encoder

This encoder outputs an absolute angular position between 0° and 360° in the specified resolution. It can also count 4096 revolutions. So with a ball screw, for example, the absolute position of the slide can be determined over a longer distance.

14th position in the Article No. of the motor	Designation	
1FT2 ...-...- S ..	AS22DQC	Absolute encoder 22-bit singleturn (resolution 4194304)
1FT2 ...-...- M ..	AM22DQC	Absolute encoder 22-bit + 12-bit multiturn (resolution 4194304, traversing range 4096 revolutions)
1FT2 ...-...- B ..	AS26DQC	Absolute encoder 26-bit singleturn (resolution 67108864)
1FT2 ...-...- C ..	AM26DQC	Absolute encoder 26-bit + 12-bit multiturn (resolution 67108864, traversing range 4096 revolutions)

Technical specifications

Holding brake

Many drives need a holding brake with an EMERGENCY STOP function for safety reasons or to meet process requirements. The brakes used on the SIMOTICS S-1FT2 motors function according to the closed-circuit principle. A spring or permanent magnet exerts a tensile force on the brake armature disk, i.e. in a state of zero current, the brake is closed and the motor shaft thereby stopped.

An electric current that flows through a coil generates an opposing field that counteracts the force effect of the spring or permanent magnet and releases or holds open the brake. Only a limited number of braking operations can be performed for an EMERGENCY STOP or power failure without causing excessive wear on the holding brake. The holding brake is not an operational brake. Regular dynamic braking leads to increased wear

and premature brake failure. In order to ensure the functionality and specification of the brake, neither the total operating energy nor the maximum switching energy per braking operation may be exceeded.

The brake control is already fully integrated into the SINAMICS S210 converter system, so that an external circuit is not necessary.

After an EMERGENCY STOP sequence with the maximum single switching energy, a cooling time of at least 5 minutes must be allowed.

The following table contains technical specifications of the holding brakes for operating on a SINAMICS S210 (for 1-AC devices as of hardware version 2) and from firmware V5.2.

Motor	Shaft height	Holding torque Nm (lb _r -ft)	Average dynamic braking torque Nm (lb _r -ft)	Maximum dynamic braking torque Nm (lb _r -ft)	Opening time ms	Closing time ms	Maximum permissible single switching energy J	Total operating energy (service life) kJ	Holding current A	Break-induced current, typ. ¹⁾ for 500 ms A
1FT2102	20	0.32 (0.24)	0.32 (0.24)	1 (0.74)	25	20	7.4	1.75	0.1	0.6

Detailed technical information on the SINAMICS S210 servo drive system is available on the internet at:

www.siemens.com/sinamics-s210/documentation

In addition, the Drive Technology Configurator (DT Configurator) can be used on the internet at the following address:

www.siemens.com/sinamics-s210/configuration

SIMOTICS S-1FS2 servomotors for SINAMICS S210

Overview

The SIMOTICS S-1FS2 servomotors are compact and highly dynamic synchronous motors, especially designed for use in food and pharmaceutical environments with the most stringent requirements for hygiene and cleanliness. They are characterized by high power density, degree of protection and overload capability, a design suitable for cleaning and the use of materials that are approved to be used in food processing.

Benefits

The SIMOTICS S-1FS2 servomotors fully exploit their strengths in the system with the SINAMICS S210 converter:

- Short adjustment and positioning times
- Quick and precise compensation of disturbances
- Stable closed loop control with high dynamic response
- Maximum flexibility in the selection
- Increased ruggedness
- Simplified cleaning

This is achieved by:

- Rapid control cycle
- High pulse frequency
- Complex rule algorithms
- Highest resolution optical encoders
- Low moment of inertia of the motors
- High overload capability
- One cable connection system

Application

- Food and beverage industry
- Pharmaceutical industry
- Packaging machines
- Handling equipment
- Feed and withdrawal devices

5.5 m (18.05 ft)	L	11 m (36.09 ft)	X

The connection cable of the SIMOTICS S-1FS2 servomotors can be extended with additional cables up to a total cable length of 50 m (164 ft). This applies to motors with the additional order code Q1. (Cable end with SPEED-CONNECT coupling).

For further information see section MOTION-CONNECT connection systems from page 4/1.

SIMOTICS S-1FS2 servomotors for SINAMICS S210

Technical specifications

General technical specifications

SIMOTICS S-1FS2 motors	
Motor type	Permanent-magnet synchronous motor
Permissible operating conditions without derating	
• Ambient temperature	-15 ... +40 °C (5 ... 104 °F)
• Installation altitude, max.	1000 m (3281 ft)
Degree of protection	IP66, IP67
According to EN 60034-5 (IEC 60034-5), ISO 20653	IP69K (does not apply to the shaft outlet)
Cooling	Natural cooling (IC410)
According to EN 60034-6	
Type of construction	IM B5 (IM V1, IM V3)
According to EN 60034-7 (IEC 60034-7)	
Shaft extension	Plain shaft
According to DIN 748-3 (IEC 60072-1)	Optional shaft with feather key (half-key balancing)
Shaft and flange accuracy	Tolerance N
According to DIN 42955 (IEC 60072-1)	In each case for radial eccentricity of the shaft extension, concentricity of the centering edge, and axial eccentricity of the mounting flange to the axis of the shaft extension
Vibration severity grade	Grade A
According to EN 60034-14 (IEC 60034-14)	is maintained up to rated speed
Stator winding insulation	Thermal class 155 (F)
According to EN 60034-1 (IEC 60034-1)	for a winding overtemperature of $\Delta T = 100$ K
Sound pressure level L_{pA} (1 m), max.	
According to ISO 1680	
• 1FS2104	55 dB(A) + 3 dB(A) tolerance
• 1FS2105 and 1FS2106	65 dB(A) + 3 dB(A) tolerance
• 1FS2208	70 dB(A) + 3 dB(A) tolerance
Encoder system	AM22DQC (absolute encoder 22-bit + 12-bit multitrans)
Holding brake	Optional integrated holding brake
Connection	One Cable Connection (OCC) for signals and power, open cable end for direct connection to SINAMICS converter or cable end with plug connector to connect a MOTION-CONNECT basic line
Surface	Stainless steel 1.4404, roughness < 0.8 μ m
Certificates of suitability	cURus, CE, EAC, CEL, EHEDG

Regulations, standards, specifications

The motors comply with the appropriate standards and regulations, see table below.

As a result of the fact that in many countries the national regulations have been completely harmonized with the international IEC 60034-1 recommendation, there are no longer any differences with respect to coolant temperatures, temperature classes and temperature rise limits.

General specifications for rotating electrical machines	IEC 60034-1
Terminal designations and direction of rotation for electrical machines	IEC 60034-8
Types of construction of rotating electrical machines	IEC 60034-7
Cooling methods of rotating electrical machines	IEC 60034-6
Degrees of protection of rotating electrical machines	IEC 60034-5
Vibration severity of rotating electrical machines	IEC 60034-14
Noise limit values for rotating electrical machines	IEC 60034-9
Cylindrical shaft extensions for electrical machines	DIN 748-3/IEC 60072-1

SIMOTICS S-1FS2 motors have UL approval from Underwriters Laboratories Inc. and are marked with the "UL Recognized

Component" test symbol. This is used for components which are a part of a larger product or system. This confirmed compliance with the corresponding US American and Canadian regulations, and allowed access to the North American market.

For SIMOTICS S-1FS2 motors, conformity with the relevant EC directives 2006/95/EC and 2014/35/EU and the relevant standards EN 60034-1:2010 and EN 60204-1:2006 is confirmed. By applying the CE mark to the product, Siemens AG confirms this for the product, and secures the free movement of goods within the European Union.

Specific standards for the food industry

The SIMOTICS S-1FS2 motors meet the EHEDG directives for "Class I EL AUX". FDA-listed plastic materials are used in the relevant exterior areas. The bearing grease is approved in accordance with NSF H1.

EHEDG certificate:

<https://support.industry.siemens.com/cs/document/109805184>

Technical specifications

Degree of protection according to IEC 60034-5

A suitable degree of protection must be selected according to the operating and environmental conditions to protect the motor against damage caused by the ingress of water and other liquids, as well as dust and foreign bodies.

SIMOTICS S-1FS2 motors have degree of protection IP66/IP67 as standard.

In contrast to the degree of protection IP65, the degree of protection IP67 provides increased protection against water jets and splashing water as well as brief immersion. The mounting position of the motor must be chosen so that the stagnant water at the shaft exit is avoided.

The degree of protection designation is composed from the code IP (for International Protection) and two code numbers for the protection against touching and penetration of foreign bodies, and the degree of protection against the ingress of water.

First code number

6 Protection against dust ingress and complete protection against touching

Second code number

4: Protection against splashwater from any direction

5: Protection against jet water from any direction

6: Increased protection against powerful water jets from any direction

7: Protection against brief immersion

Type of construction, mounting position according to IEC 60034-7

SIMOTICS S-1FS2 motors are designed in type of construction IM B5. They may also be used in the mounting positions IM V1 and IM V3.

Degree of protection according to ISO 20653

The motor meets the IP69K requirements of the ISO 20653 standard. Deviating, the test pressure here is 3 MPa (30 bars). Using a much higher pressure for cleaning is generally not advisable in the food sector, as there is a risk of re-contaminating already cleaned system parts with the spray mist.

Chemical resistance and cleaning agents

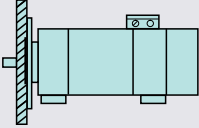

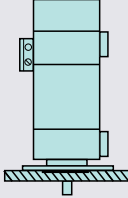

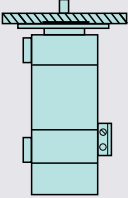

The SIMOTICS S-1FS2 motor is resistant to a wide range of cleaning agents and processes used in the food industry.

For detailed information, such as admissible cleaning agents, see operating instructions "SINAMICS servo drive system with 1FS2":

<https://support.industry.siemens.com/cs/document/109796333>

Note:

An EHEDG-compliant V3 mounting position requires additional measures, such as a cover for the motor flange.

Code 1	IM B5	IM V1	IM V3
Code 2	IM 3001	IM 3011	IM 3031
			
	Horizontal flange mounting	Flange mounting, output shaft pointing vertically downwards	Flange mounting, output shaft pointing vertically upwards

SIMOTICS S-1FS2 servomotors for SINAMICS S210

Technical specifications

Shaft and flange accuracy in accordance with IEC 60072-1

Radial eccentricity tolerance of shaft in relation to housing axis (referred to cylindrical shaft extensions)

Motor	Shaft extension D × L mm (in)	Radial eccentricity Tolerance N μm
1FS2104	19 × 40 (0.75 × 1.57)	40
1FS2105		
1FS2106	24 × 50 (0.94 × 1.97)	

Concentricity and axial eccentricity tolerance of the flange surface for the shaft axis (referred to the centering diameter of the mounting flange)

Motor	Centering diameter mm (in)	Concentricity and axial eccentricity Tolerance N μm
1FS2104	70 (2.76)	80
1FS2105	95 (3.74)	
1FS2106	110 (4.33)	100
1FS2208	130 (5.12)	

Test: runout

Test: concentricity

Test: perpendicularity

Vibration severity and vibration severity grade A according to IEC 60034-14

The vibration severity is the RMS value of the vibration velocity (frequency range from 10 Hz to 1000 Hz). The vibration severity is measured using electrical measuring devices according to DIN 45666.

The specified values refer only to the motor. These values can increase as a result of the overall system vibrational behavior due to installation.

Vibration severity limit values

The speeds of 1800 rpm and 3600 rpm and the associated limit values are specified according to IEC 60034-14. The speeds of 4500 rpm and 6000 rpm and the specified values are defined by the motor manufacturer.

The motors maintain vibration severity grade A up to the rated speed.

Balancing according to ISO 21940-32

Apart from the balance quality of the motor, the vibrational quality of motors with attached belt pulleys is mainly determined by the balance state of the mounted component. If the motor and the mounted component are balanced separately before being joined, the balancing process of the belt pulley is to be adapted to the motor's balancing type.

SIMOTICS S-1FS2 motors with feather keys are always half-key balanced. In general, motors with a plain shaft are recommended for systems with the most stringent vibrational quality requirements.

Technical specifications

Vibration stress, imitted vibration values

The requirements of environmental class 3M8 (according to EN 60721-3-3 Table 6) must be maintained for proper function and safeguard the bearing life. The following limits are valid for (imitted) vibration values introduced into the motor from outside:

- Vibration velocity V_{rms} according to ISO 10816, max. 4.5 mm/s (0.18 in/s)
- Vibration acceleration a_{peak} axial and radial 50 m/s² (164 ft/s²)

During transport, the motors withstand single shocks (6 ms) of up to 250 m/s² (820 ft/s²).

Ambient temperature and installation altitude

Operating range without restrictions:

Temperature range from -15 °C to +40 °C (5.0 °F to 104 °F), installation altitude up to 1000 m (3281 ft).

If deviating conditions are encountered, the S1 characteristic of the motor must be adapted with regard to speed and torque.

Use the following equation to calculate the reduced S1 characteristic:

$$S1_{\text{red}}(n) = x_D \times S1_{40^\circ\text{C}; 1000\text{m}}(n/x_D)$$

Installation altitude above sea level m (ft)	Derating factor x_D at an ambient temperature of					
	5 °C (41 °F)	10 °C (50 °F)	20 °C (68 °F)	30 °C (86 °F)	40 °C (104 °F)	50 °C (122 °F)
1000 (3281)	1.16	1.14	1.1	1.05	1	0.91
2000 (6562)	1.12	1.1	1.05	1	0.95	0.84

Holding brake

Many drives need a holding brake with an EMERGENCY STOP function for safety reasons or to meet process requirements. The brakes used on the SIMOTICS S-1FS2 motors operate on the quiescent current principle. A spring or permanent magnet exerts a tensile force on the brake armature disk. This means that the brake is closed and the motor shaft thereby stopped in a state of zero current.

An electric current that flows through a coil generates an opposing field that counteracts the force effect of the spring or permanent magnet and releases or holds open the brake. Only a limited number of braking operations can be performed for an EMERGENCY STOP or voltage failure without causing excessive wear on the holding brake. The holding brake is not an operational brake. Regular dynamic braking leads to increased wear and premature brake failure. In order to ensure the functionality and specification of the brake, neither the total operating energy nor the maximum switching energy per braking operation may be exceeded.

Motor	Shaft height	Holding torque	Average dynamic braking torque	Maximum dynamic braking torque	Opening time	Closing time	Maximum permissible single switching energy	Total operating energy (service life)	Holding current	Break-induced current, typ. ¹⁾ for 500 ms
		Nm (lb _f -ft)	Nm (lb _f -ft)	Nm (lb _f -ft)	ms	ms	J	kJ	A	A
1FS2104	40	3.3 (2.43)	3.3 (2.43)	9 (6.64)	50	40	270	120	0.2	1.2
1FS2105	52	8 (5.90)	5 (3.69)	18 (13.28)	35	20	570	284	0.3	1.1
1FS2106	63	16 (11.80)	9 (6.64)	35 (25.82)	70	35	1065	774	0.35	1.1
1FS2208	80	32 (23.60)	17 (12.54)	70 (51.63)	120	40	4800	2400	0,5	1,4

¹⁾ Typical values at an ambient temperature of 20 °C (68 °F).
At -15 °C (5 °F), the break-induced currents can increase by up to 30 %.

Encoder system

In motors with integrated OCC/DRIVE-CLiQ interface, the sensor signal is already digitally prepared in the motor, and then transferred quickly and without loss to the drive system. Motors with an OCC/DRIVE-CLiQ interface simplify commissioning and diagnostics, as the motor parameters and encoder system are identified automatically.

Multiturn absolute encoder

AM22DQC: absolute encoder 22-bit + 12-bit multiturn

This encoder outputs an absolute angular position between 0° and 360° in the specified resolution. It can also count 4096 revolutions. The absolute position is also sensed in the de-energized state. With a ball screw, for example, the absolute position of the slide can be determined over a longer distance.

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors

Overview

SIMOTICS S-1FK2 and S-1FT2
servo planetary geared motors

- Gearbox type NRB

- Gearbox type NRK

- Gearbox type NLC

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors with the NRB, NRK and NLC gearboxes are highly dynamic, compact and cost-effective drive units. The combinations, each composed of a servomotor with a high-performance planetary gearbox, are suitable for a wide range of applications in an industrial environment.

These planetary geared motors are specified and delivered completely as a unit. All outstanding performance data are matched to the motor-gearbox combination.

Motors

High Dynamic

Wherever small masses have to be moved with maximum dynamics and precision, the 1FK2 and 1FT2 High Dynamic servomotors with low inertia really come into their own. The lightweight and low-friction gearboxes in conjunction with inertia-optimized clamping systems allow the highest cycle rates in the application.

Compact

If larger loads need to be moved with precision and dynamically, a motor version with higher inertia is unavoidable for controllable operations. The 1FK2 and 1FT2 Compact servomotors with medium inertia and planetary gearboxes with higher transmission ratios enable even difficult inertia conditions to be mastered in terms of the control technology.

Gearboxes

The three planetary gearboxes NRB, NRK, and NLC can be mounted in all spatial positions without restriction and are maintenance-free thanks to their life-long lubrication.

NRB

NRB is the lightest gearbox with the highest power density. Thanks to its low friction bearing design it is suitable for high speeds and only generates a slight amount of heat.

Application areas:

- Packaging
- Food industry
- Pharmaceutical and medical systems
- Auxiliary axes in machine tools

NRK

The NRK series gearbox is suitable for higher radial and axial forces due to the large output bearing. This gearbox is also suitable for higher speeds thanks to low internal friction.

Application areas:

- Automation and mounting technology
- Packaging
- Auxiliary axes in machine tools

NLC

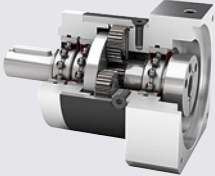

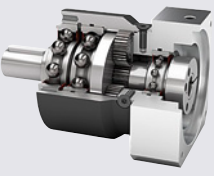

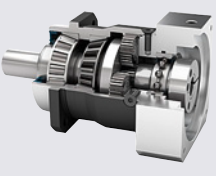

Thanks to the preloaded tapered roller bearing, the NLC gearbox has a high degree of rigidity and is perfectly suited for high radial and axial loads. The IP65 cover provides protection against dust and water.

Application areas:

- Automation and mounting technology
- Packaging
- Food industry
- Printing industry
- Auxiliary axes in machine tools

Notes:

- The geared motor can only be delivered as a unit – motor plus gearbox – (no individual gearboxes).
- Not all combinations are possible.
- For shaft design with feather key, the gearbox data only applies to pulsating loads. With alternating load / reversal of direction of rotation, limitation of the torque as a function of the number of load cycles is required (see [Configuration Manual](#)).

Option for shaft

The output shaft of the planetary gearbox can be ordered as a plain shaft for a friction-locked connection or optionally with a feather key for positive transmission.

A friction-locked connection free of backlash (plain shaft) is recommended for dynamic loads, particularly during reversals in operation.

For pulsating loads without reversals, a positive feather key connection is also suitable as an alternative.

Limitation of output torques for gearbox shaft with feather key

It must be ensured that the following torques are not exceeded at the output shaft for gearboxes with feather key and changing application loads. Regardless of this, other limitations such as maximum torque $M_{2max,G}$ or the rated torque $M_{2N,G}$ of the gearbox components are maintained.

Gearbox	Max. application torque M_2 in feather key design in Nm	
	up to 10 million load changes	up to 100 million load changes
NRB040	9	7

Option for lubrication

Planetary gearboxes can be optionally ordered with a food-grade lubricant.

This lubricant was developed for the food and pharmaceutical industries for unpredictable contact with products and packaging in the food, cosmetics, pharmaceutical and animal feed industries. NSF H1 registration ensures that the lubricant is compliant with FDA 21 CFR §178.3570.

General technical specifications for NRB, NRK and NLC gearboxes

Technical specifications

General technical specifications for NRB, NRK and NLC gearboxes

Largest average input speed $n_{1av,G}$ and maximum input speed $n_{1max,G}$

$n_{1av,G}$ – largest average input speed:

In each time window of 15 minutes, the average input speed must be below $n_{1av,G}$

$n_{1max,G}$ – maximum input speed:

The maximum input speed $n_{1max,G}$ must never be exceeded.

The maximum speeds of the mounted motor can be found in the data sheet resulting from the configuration on the DT Configurator.

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors

Gearbox type NRB

Technical specifications

 η_G – Efficiency of the gearbox components under full load

The exact values for the efficiency are, to some extent, dependent on the frame size of the mounted motor and can be found in the data sheet resulting from the configuration on the DT Configurator.

In the partial load range, especially when the gearbox is cold, the efficiency of the gearbox is always lower than at operating speed. The gear losses are already taken into account in the characteristic curves and in the following characteristic data of the geared motor or its components: $M_{2,0}$, $M_{2,max}$, $M_{0,M}$, $M_{max,M}$.

A reduction of this characteristic curve and the characteristics on efficiency is not necessary.

Permissible shaft loading capacity

The limit values shown for the bearing load refer to equivalent forces to be determined mathematically, whose effect is equivalent to the forces occurring in the load profile.

They only apply to radial and axial loads. Axial forces up to maximum $F_A = 0.24 \times F_R$ are permissible in case of superimposition. They apply to the output speed of 100 rpm and in case of radial force for a force application point in the center of the shaft or for centrally applied axial force. For other speeds or force application points, the permissible radial forces must be obtained from the radial force diagrams of the Configuration Manual.

η_G – Efficiency of the gearbox components under full load

The exact values for the efficiency are, to some extent, dependent on the frame size of the mounted motor and can be found in the data sheet resulting from the configuration on the DT Configurator.

In the partial load range, especially when the gearbox is cold, the efficiency of the gearbox is always lower than at operating speed. The gear losses are already taken into account in the characteristic curves and in the following characteristic data of the geared motor or its components: $M_{2,0}$, $M_{2,max}$, $M_{0,M}$, $M_{max,M}$.

A reduction of this characteristic curve and the characteristics on efficiency is not necessary.

	Food-grade lubricant				+	Solid shaft with feather key					M 1 1

Notes:

- The geared motor can only be delivered as a unit – motor plus gearbox (no individual gearboxes).
- Not all combinations are possible – See selection and ordering data tables.
- For shaft design with feather key, the gearbox data only applies to pulsating loads. With alternating load/reversal of direction of rotation, limitation of the torque as a function of the number of load cycles is required (see Configuration Manual).

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors

Notes on the selection

Selection and ordering data

Characteristic curves of the geared motor (available via the DT Configurator)

- $M_{S1,M}$ – Characteristic of the largest thermally permissible effective torque of the motor component minus the gear friction and with consideration of the thermal interactions of the gearbox attachment. The effective operating point must be below this line to avoid thermal overload of the geared motor.
- $M_{max,M}$ – Characteristic of the largest torque that can be generated by the motor component for a short time minus the gear friction.

$M_{S1,M}$ and $M_{max,M}$ may exceed the mechanically permissible limits of the gearbox, depending on the selection of the motor-gearbox combination ¹⁾.

Important gearbox component data in this catalog:

- $M_{2N,G}$ – The rated torque of the gearbox component at the output. This represents the fatigue strength limit of the gear teeth (independently of the motor). If exceeded, the gearbox is partially damaged and a service life calculation is required.
- $M_{2max,G}$ – Maximum torque of the gearbox component. This is the limit of the time strength range (can be tolerated for 30000 revolutions of the output shaft). There is a risk of breakage if the limit is exceeded.
- $n_{1av,G}$ – Greatest average input speed. In each time window of 15 minutes, the average input speed must be below $n_{1av,G}$.

Important motor component data in this catalog:

- $M_{0,M}$ – The motor component can deliver this torque thermally on a sustained basis at standstill and near standstill. It may exceed the mechanical limits of the gearbox component if necessary ¹⁾.
- $M_{max,M}$ – The motor component can deliver this torque for a short time. It may exceed the mechanical limits of the gearbox component if necessary ¹⁾.

Important geared motor system data in this catalog:

- Rated operating point:
 M_{2N} – Rated torque and
 n_{2N} – rated speed.
 This rated point can be permanently driven thermally and mechanically. If the S1 characteristic $M_{S1,M}$ at n_{2N} is greater than $M_{2N,G}$, M_{2N} is reduced accordingly. At the rated point, the geared motor has approximately its maximum power.
- $M_{2,0}$ – The geared motor can deliver this torque thermally on a sustained basis at standstill and near standstill. It is reduced to $M_{2N,G}$ if necessary.
- M_{2max} – The geared motor can deliver this torque for a short time. It may be within the time strength range of the gearbox.

¹⁾ In this case, it must be ensured that the torque effective at the gearbox output does not exceed the permissible limits (consideration of the load-to-motor inertia ratio during acceleration processes).
 More information is provided in the Configuration Manual.

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors

Notes on the selection

Selection and ordering data

Glossary

Formula symbols	Unit	Designation	Explanation
i		Transmission ratio	Input-to-output speed transmission ratio
C_{T2}	Nm/°	Torsional stiffness of the gearbox	Torsional stiffness of the gearbox related to the output
J_1	kg cm ²	Mass moment of inertia of the geared motor	Total mass moment of inertia of the geared motor related to the input or the motor shaft
$J_{1,G}$	kg cm ²	Mass moment of inertia of the gearbox component	Mass moment of inertia of the gearbox component of a geared motor related to the input of the gearbox
J_M	kg cm ²	Mass moment of inertia of the motor component without brake	Mass moment of inertia of the motor component of a geared motor
$J_{M,Br}$	kg cm ²	Mass moment of inertia of the motor component with brake	Mass moment of inertia of the motor component of a geared motor including motor holding brake
m	kg	Mass of the geared motor	Total mass of the geared motor
m_G	kg	Mass of the gearbox component	Mass of the gearbox component of a geared motor
m_M	kg	Mass of the motor component	Mass of the motor component of a geared motor
$m_{M,Br}$	kg	Mass of the motor component with brake	Mass of the motor component with motor holding brake
$M_{0,M}$	Nm	Static torque of the motor component on the geared motor	Torque of the motor component at standstill and near standstill that can be generated permanently electrically or on average. If this is above $M_{2max,G}$, it must be ensured that a maximum of $M_{2max,G}/i$ is applied to the gearbox input (observe the gearbox inertia to load inertia ratio). If necessary, limit the acceleration, torque or current accordingly on the application side.
$M_{2,0}$	Nm	Geared motor static torque	The geared motor can deliver this torque thermally on a sustained basis at standstill and near standstill. It is within the fatigue strength range of the gearbox.
M_{2N}	Nm	Rated torque of the geared motor	The geared motor can deliver this torque thermally on a sustained basis at its rated speed. It is within the fatigue strength range of the gearbox.
$M_{2N,G}$	Nm	Rated torque of the gearbox component	Rated torque of the gearbox component at the output. This represents the fatigue strength limit of the gear teeth (independently of the motor). If exceeded, the gearbox is partially damaged and a service life calculation is required.
M_{max}	Nm	Maximum torque of the motor	Maximum torque of the motor that can be generated for a short time.
M_{2max}	Nm	Maximum torque of the geared motor	Maximum possible short-term and permissible torque at the output of the geared motor.
$M_{max,M}$	Nm	Maximum torque of the motor component	Electrically generated maximum torque of the motor component. If this is above $M_{2max,G}$, it must be ensured that a maximum of $M_{2max,G}/i$ is applied to the gearbox input (observe the gearbox inertia to load inertia ratio). If necessary, limit the acceleration, torque or current accordingly on the application side.
$M_{2max,G}$	Nm	Maximum torque of the gearbox component	Maximum (very rare) permissible torque at the output of the gearbox. This is the limit of the time strength range. There is a risk of breakage if the limit is exceeded.
$M_{2Em.Off}$	Nm	Emergency Off torque	$M_{2Em.Off}$ can be tolerated a maximum of 1000 times during the gearbox service life without causing unacceptable damage to the gearbox. This code can be used to check whether high torques, caused by very rare operating faults, can damage the gearbox.
$n_{1av,G}$	rpm	Largest average input speed of the gearbox component	In each time window of 15 minutes, the average input speed must be below $n_{1av,G}$.
$n_{1max,G}$	rpm	Maximum input speed of the gearbox component	Maximum permissible short-term input speed of the gearbox component on a geared motor
$n_{max,M}$	rpm	Maximum speed of the motor component	Maximum achievable and maximum permissible speed of the motor component on a geared motor
$n_{2B,G}$	rpm	Reference speed of the gearbox	Reference speed relative to the rated torque $M_{2N,G}$ of the gearbox component. This is required to perform a service life calculation of the gearbox output bearings.
n_{2max}	rpm	Maximum speed of the geared motor	Maximum achievable and maximum permissible speed at the gearbox output of a geared motor
n_{2N}	rpm	Rated speed of the geared motor	The rated torque of the geared motor is specified at this speed
F_R	N	Radial force	Radial force perpendicular to the shaft axis
$F_{R eq}$	N	Average radial force	Radial force averaged over the cycle, perpendicular to the shaft axis. For ball bearings, use the cubic mean. For roller bearings, use the exponent 3.33 instead of the exponent 3.
$F_{R max}$	N	Maximum radial force	Maximum statically permissible radial force
F_A	N	Axial force	Axial force
$F_{A eq}$	N	Average axial force	Axial force averaged over the cycle. For ball bearings, use the cubic mean. For roller bearings, use the exponent 3.33 instead of the exponent 3.
$F_{A max}$	N	Maximum axial force	Maximum statically permissible axial force
M_b	Nm	Maximum permissible bending moment	Maximum permissible bending moment at the motor flange to gearbox adapter separation point
φ_2	'	Torsional backlash of the gearbox	Torsional backlash of the gearbox related to the output

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors

Notes on the selection

Selection and ordering data

Selection of servomotors with planetary gearbox

- Select gearbox type and gearbox size, e.g. on the basis of the required torque or the required shaft loads - Table *Permissible output shaft loads*.
- Select a suitable servomotor-gearbox combination from the *Selection data servomotors with planetary gearbox*, the *Servomotor data* and the *Planetary gearbox data*, e.g. on the basis of the rated speed of the servomotor with planetary gearbox, the associated transmission ratio and the rated torque. The fatigue strength of the motor and gearbox combination must be taken into account – see color background of the *Selection data servomotors with planetary gearbox* with associated color legend.

Structure of the tables for selection and ordering data

All combinations of servomotors with planetary gearbox including the transmission ratios available in each case can be found in the selection tables for SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors.

The selection tables are sorted according to the following criteria:

- Line supply voltage of the converter
- Gearbox type and size

The following views contain legends with explanations of the formula symbols and units specified in the selection and order tables.

Legend for "Servomotor data":

Servomotor data	Selection data servomotors with planetary gearbox	Servomotors with planetary gearbox
$M_{0,M}$ $M_{max,M}$ J_M ($J_{M,Br}$) Nm Nm kg cm ²		
	Rotor moment of inertia of the motor component (with holding brake) ¹⁾	1F.2102-0AG..-0...-Z
	Maximum possible short-term torque of the motor component ²⁾	■ + ■ + ...
	Maximum thermally permissible effective torque of the motor component at standstill or near standstill ²⁾	■ + ■ + ...

Legend for "Selection data servomotors with planetary gearbox":

Servomotor data	Selection data servomotors with planetary gearbox	Servomotors with planetary gearbox
$M_{0,M}$ $M_{max,M}$ J_M ($J_{M,Br}$) Nm Nm kg cm ²		
...	n_{2N} rpm Rated speed of the servo planetary geared motor	1F.2102-0AG..-0...-Z
	M_{2N} Nm Rated torque of the servo planetary geared motor	■ + ■ + ...
	$M_{2,0}$ Nm Static torque of the servo planetary geared motor	
	M_{2max} Nm Max. permissible short-term output torque of the servo planetary geared motor	

Legend for "Planetary gearbox data":

Servomotor data	Selection data servomotors with planetary gearbox	Servomotors with planetary gearbox
$M_{0,M}$ $M_{max,M}$ J_M ($J_{M,Br}$) Nm Nm kg cm ²		
Planetary gearbox data		1F.2102-0AG..-0...-Z
Gearbox type, gearbox stages:	Gearbox type and number of gearbox stages	■ + ■ + ...
1. Order code	1. Order code for gearbox type, gearbox size and number of gearbox stages	
i	Transmission ratio	
2. Order code	2. Order code for transmission ratio	
$M_{2N,G}$ Nm	Rated torque of the gearbox component (fatigue strength)	
$M_{2max,G}$ Nm	Maximum permissible short-term output torque of the gearbox (fatigue strength, max. 30000 revolutions of the output shaft)	
$M_{2Em.Off}$ Nm	Emergency Off output torque of the gearbox (max. 1000 times)	
$J_{1,G}$ kg cm ²	Moment of inertia of the gearbox related to the input ¹⁾	
$\varphi_{2,G}$	Torsional backlash of the gearbox related to the output	

Color legend for the fatigue strength of the motor and gearbox combination:

Color legend:	$M_{max,M} \times i < M_{2N,G}$	The motor and gearbox combination is fatigue-proof
	$M_{2N,G} < M_{max,M} \times i < M_{2max,G}$	Check acceleration and inertias, perform service life calculation if necessary
	$M_{max,M} \times i > M_{2max,G}$	The motor can destroy the gearbox, check acceleration and inertias, perform service life calculation if necessary

¹⁾ The total mass inertia is the sum of the motor and gearbox mass inertia. On some motors, the inertia of the gearbox clamping system is attributed to the motor.

²⁾ Exact values can be found in the data sheet of the motor-gearbox combination, available via the DT Configurator.

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors for servo converters with line connection 230 V 1 AC / 240 V 3 AC

Selection and ordering data

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors

The following servo planetary geared motors are suitable for servo converters with line connection 200 V to 240 V 1 AC as well as 200 V to 240 V 3 AC, especially for SINAMICS S210 servo converters.

The rated points of the geared motors are adapted to this voltage.

SINAMICS S210 servo converter with SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors

for servo converters with line connection 230 V 1 AC / 240 V 3 AC

Gearbox type NRB040

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors for servo converters with line connection 400 V 3 AC

Selection and ordering data

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors

The following servo planetary geared motors are suitable for servo converters with line connection 380 V to 480 V 3 AC, especially for SINAMICS S120 and SINAMICS S210 servo converters.

The rated points of the geared motors are adapted to this voltage.

SINAMICS S210 servo converter with SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors

SINAMICS S120 servo converter

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors

for servo converters with line connection 400 V 3 AC

Gearbox type NRB060

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors for servo converters with line connection 400 V 3 AC

Gearbox type NRK120

Selection and ordering data

Permissible output shaft loads		
Average radial force for 20000 h	$F_{R,eq}$	2500 N
Average axial force for 20000 h	$F_{A,eq}$	4000 N
Average radial force for 30000 h	$F_{R,eq}$	2150 N
Average axial force for 30000 h	$F_{A,eq}$	3000 N
Maximum radial force	$F_{R,max}$	4000 N
Maximum axial force	$F_{A,max}$	5900 N

SIMOTICS S-1FK2 and S-1FT2 servo planetary geared motors

for servo converters with line connection 400 V 3 AC

Gearbox type NLC120

Selection and ordering data

Permissible output shaft loads		
Average radial force for 20000 h	$F_{R,eq}$	6000 N
Average axial force for 20000 h	$F_{A,eq}$	8000 N
Average radial force for 30000 h	$F_{R,eq}$	5400 N
Average axial force for 30000 h	$F_{A,eq}$	7000 N
Maximum radial force	$F_{R,max}$	6000 N
Maximum axial force	$F_{A,max}$	8000 N

MOTION-CONNECT connection systems

MOTION-CONNECT connection systems

Overview

MOTION-CONNECT cables are suitable for use with many different types of machine tools and production machinery.

The following variants of MOTION-CONNECT cable are available as fully-assembled power and signal cables or sold by the meter:

- **MOTION-CONNECT 500**
 - Cost-effective solution for predominantly fixed installation
 - Suitable for low mechanical loading
 - Tested for traversing paths up to 5 m (16.4 ft)
- **MOTION-CONNECT 800PLUS**
 - Meets requirements for use in cable carriers
 - Suitable for high mechanical loading
 - Oil resistance
 - Tested for traversing paths of up to 50 m (164 ft)
- **MOTION-CONNECT 400 (only for SIMOTICS S-1FS2 motors)**
 - Extremely chemically resistant FEP jacket (especially against common cleaning agents and disinfectants used in the F&B industry)
 - With integrated pressure compensation tube
 - Not suitable for repeated bending stress!

Benefits

Pre-assembled MOTION-CONNECT cables provide high quality and impeccable system-tested functionality.

SPEED-CONNECT

Connectors with SPEED-CONNECT quick-release locks enable fast, stable and reliable connection. All that is required to attain stable interlocking and a secure connection is less than a quarter turn of the lock nut of the connector. Tools are not required.

Cables with SPEED-CONNECT connectors supplement the previous offering of MOTION-CONNECT cables with full-thread connectors.

Application

MOTION-CONNECT cables are designed for machinery use. They are not suitable for building technology applications or outdoor installation.

MOTION-CONNECT cables have been tested in a cable carrier with horizontal traversing path and have also been designed for this type of application. They are not self-supporting.

The pre-assembled cables can be ordered in length units of 10 cm (3.94 in) and can be extended, if necessary.

When cable lengths (basic cables and extensions) are determined for the systems and applications described in this catalog, the technically permissible maximum cable lengths (e.g. 25 m (82 ft)) specified in the catalog must be observed. Malfunctions can occur if longer cables are used. Siemens assumes no liability for correct transmission of signals or power in this case.

Function

The cables must be removed from the drum without twisting, i.e., the cables must be unwound and must never be lifted over the drum flange in loops.

To maximize the service life of the cable carrier and cables, cables in the carrier made from different materials must be separated by spacers in the cable carrier. The spacers must be filled evenly to ensure that the position of the cables does not change during operation. The cables should be distributed as symmetrically as possible according to their weights and dimensions. Cables with very different outer diameters should also be separated by spacers.

When inserting pre-assembled cables into the cable carrier, do not pull at the connector, as this may damage the strain relief or cable clamping.

The cables must not be fixed in the cable carrier. They must be freely movable.

The cables must be able to be moved without applying force in particular in the bending radii of the carrier. The specified minimum bending radius must be adhered to.

Function

The cable fixings must be attached at both ends at an appropriate distance away from the end points of the moving parts in a dead zone.

MOTION-CONNECT cables are tested in a cable carrier. The cables are attached at one end by means of strain relief to the moving ends of the cable carrier. Strain relief is applied over a wide area of the cable jacket surface without crimping the cable.

Cables must be installed in accordance with the instructions supplied by the cable carrier manufacturer.

Note:

If, for example, pre-assembled cables are installed in a cable carrier in such a way that the connector would inhibit assembly, pre-assembled cables without assembled connector can also be supplied (power and signal cables¹⁾). Depending on the version, the contacts of the cables are crimped and the connector is supplied separately. After installing the cables, the customer assembles the connector.

In case of vibration load and with horizontal or vertical cable entries, we recommend that the cable is additionally fixed if between the cable strain relief on the cable carrier and the terminal at the motor part of the cable is hanging loose or is not routed. To prevent machine vibrations being transmitted to the connectors, the cable should be fixed at the moving part where the motor is mounted.

Characteristic curves

Characteristic curve for MOTION-CONNECT 800PLUS

The blue area beneath the characteristic curve represents the potential range of use for the cables. The characteristic curve represents the tested operating points.

Permissible acceleration for MOTION-CONNECT 800PLUS signal and power cables up to 16 mm²

¹⁾ Not for DRIVE-CLiQ signal cables.

MOTION-CONNECT connection systems

More information

Current carrying capacity for power and signal cables

The current carrying capacity of PVC/PUR-insulated copper cables is specified in the table for installation types B1, B2, C, and E under continuous operating conditions with reference to

an ambient air temperature of 40 °C (104 °F). For other ambient temperatures, the values must be corrected by the derating factors from the table.

Cross-section mm ²	Current carrying capacity rms AC 50/60 Hz or DC in amps for installation type			
	B1 Single-core cables in conduits or installation ducts	B2 Multi-core cables in conduits or installation ducts	C Multi-core cables, vertically or horizontally on walls/open, without conduits and installation ducts/ with contact	E Multi-core cables, horizontally or vertically on perforated cable racks/open, without conduits and installation ducts/ with contact

Note:

Derating for MOTION-CONNECT 400 analog acc. to EN 60204-1.

¹⁾ One control circuit pair.

²⁾ One symmetrically loaded three-phase AC cable.

Overview

Motor and converter are simply connected to one another by one cable instead of the usual two or three cables. With this One Cable Technology, energy supply, encoder signals and braking signal are brought together in a single cable.

This results in the following advantages:

- Time-saving by laying only one cable
- Smaller installation space and space requirement in cable collars
- Only one cable has to be cleaned. This is advantageous, e.g. in the pharmaceutical industry and where higher requirements are placed upon hygiene
- Can be ordered to the decimeter
- Compact connection system
- Rotatable connectors on the motor side
- Motor with very low interfering contour for restricted installation space
- Bending radius optimized to $2.5 \times$ cable diameter static or $4 \times$ cable diameter dynamic for MOTION-CONNECT 800PLUS

SINAMICS SELECTOR App Mobile selection guide for frequency converters

Siemens has developed the SINAMICS SELECTOR app as a practical tool for finding article numbers for your SINAMICS converter in the power range from 0.1 kW to 630 kW quickly and easily. Whether for SINAMICS V20, SINAMICS G120C, SINAMICS G120P, SINAMICS G120X, SINAMICS G120 or SINAMICS S210: The app will provide you with the correct article numbers conveniently.

How does it work? Simply select your application, the frequency converter you require, the rated power and device options as well as the necessary accessories. Then you can save your selection and send it by email. The preselection serves as the basis for an order specification with the dealer/Siemens.

You will find free downloads for Android and iOS here:

www.siemens.com/sinamics-selector

Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that may be implemented, please visit <https://www.siemens.com/industrialsecurity>

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under <https://www.siemens.com/cert>

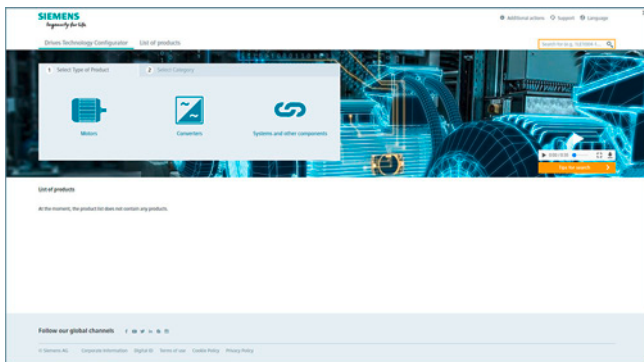

Engineering tools

Drive Technology Configurator

Overview

The Drive Technology Configurator (DT Configurator) helps you to configure the optimum drive technology products for your application – starting with gearboxes, motors, converters as well as the associated options and components and ending with controllers, software licenses and connection systems. Whether with little or detailed knowledge of products: preselected product groups, deliberate navigation through selection menus and direct product selection through entry of the article number support quick, efficient and convenient configuration.

In addition, comprehensive documentation comprising technical data sheets, 2D dimensional drawings/3D CAD models, operating instructions, certificates, etc. can be selected in the DT Configurator. Immediate ordering is possible by simply transferring a parts list to the shopping cart of the Industry Mall.

Drive Technology Configurator for efficient drive configuration with the following functions

- Quick and easy configuration of drive products and associated components – gearboxes, motors, converters, controllers, connection systems
- Configuration of drive systems for pump, fan and compressor applications from 1 kW to 2.6 MW
- Retrievable documentation for configured products and components, such as
 - Data sheets in up to 9 languages in PDF or RTF format
 - 2D dimensional drawings/3D CAD models in various formats
 - Terminal box drawing and terminal connection diagram
 - Operating instructions
 - Certificates
 - Start-up calculation for SIMOTICS motors
 - EPLAN macros
- Support with retrofitting in conjunction with Spares On Web www.siemens.com/sow
- Ability to order products directly through the Siemens Industry Mall

Access to the Drive Technology Configurator

The Drive Technology Configurator can be called up without registration and without a login:
www.siemens.com/dt-configurator

Overview

Selection guide and configurator for automation technology

Error-free configuration without expert knowledge through intelligent configurators and selection wizards. Desktop and cloud versions enable cross-team collaboration with maximum flexibility.

There are two versions of the TIA Selection Tool:

- One for downloading and execution on Windows PCs (from Microsoft Windows 10)
- One for running from the cloud, which is launched from mobile devices directly in the browser (we recommend Safari, Chrome and Firefox)

Projects stored in the cloud can be edited with both tools. This makes it possible to work on-the-go using a tablet, at home on a PC – and vice versa, or together with colleagues and customers.

In order to use the full functionality, we recommended setting up a Siemens Industry Mall account for both cases. This gives you access to prices and enables you to save your projects to our cloud.

You can find additional information about the TIA Selection Tool at:

www.siemens.com/tia-selection-tool

Drive dimensioning in the TIA Selection Tool

Application-specific requirements can be determined using drive technology dimensioning in the TIA Selection Tool. This can include motors, gearboxes and converters. The tool supports the configuration and dimensioning of control functions with an open and closed control loop. The technical documentation with features of the technical drive system, as well as a product list for ordering via the Industry Mall can also be compiled.

You can find more information on the SIZER for Siemens Drives engineering tool at

<https://support.industry.siemens.com/cs/ww/en/ps/13434/dl>

SINAMICS web server for SINAMICS S210

Overview

Web server for efficient commissioning, diagnostics and maintenance – available anywhere, anytime

Thanks to the web server, the SINAMICS S210 drive system offers efficient commissioning, diagnostics and maintenance options. The web server provides access to a multi-faceted range of new options for parameter assignment, drive diagnostics and remote maintenance for any networked PC with a web browser or for tablets and smartphones (via a separate WLAN access point), including:

- Simple and fast commissioning
- Drive traversing via the control panel
- Downloading/uploading a configuration
- Providing a status overview of the drive
- Evaluating warnings and fault messages
- Monitoring and adapting parameter setting

Integration of the SINAMICS web server as shown by the example of SINAMICS S120, SINAMICS S210 and PROFINET communication

The SINAMICS web server is available as of SINAMICS S210 firmware V5.1.

Benefits

Simple and fast commissioning

- No installation of additional commissioning software
- Simple controller optimization with One Button Tuning
- Easy parameterization of Safety Integrated Functions
- Standard pages for limit values and settings
- Comprehensive fault diagnosis
- Firmware update

Shorter machine downtimes

- Efficient diagnostics and maintenance

Direct language selection

- English, French, German, Italian, Spanish, Chinese Simplified

Accessibility

- Via all LAN or PROFINET interfaces
- Tablet and smartphone access via WLAN with separate access point

Two users with different rights profiles

- e.g. for operators and service personnel

Diagnostic functions

- Quick overview of the current configuration and the state of the drive
- Understandable diagnostic information and messages, including the causes of issues and possible remedies, are displayed in plain text in multiple languages

Freely configurable parameter lists

- Monitoring parameters for diagnostic purposes, for example for operating personnel
- Adjustment of the parameter lists using filters, parameter groups and the configuration of personal lists

Access security

- Protection against unauthorized access to the drive information

Application

The web server is ideal for applications in which special commissioning software or version dependencies are not desired. Easy commissioning, diagnostics and maintenance are possible both locally and remotely, provided appropriate security measures are applied.

Overview

SINAMICS Startdrive is integrated in the TIA Portal and is a tool for the configuration, commissioning and diagnostics of the SINAMICS family of converters.

The SINAMICS Startdrive commissioning tool has been optimized with regard to user friendliness and consistent use of the TIA Portal benefits of a common working environment for PLC, HMI and drives. Time-saving and guided step-by-step commissioning with maximum flexibility is complemented by user-friendly graphic function views for all drive functions, including functional safety (Safety Integrated) and drive-based technology functions (e.g. EPos). The automatic message display, the powerful real-time trace and the context-sensitive online help make converter diagnostics very easy.

The software packages based on the TIA Portal are harmonized with each other and offer important benefits, the main advantage being a shared project storage. The TIA Portal enables simple integration of SINAMICS converters in your automation solution. Thanks to the standardization of operator actions and the integration in general TIA Portal operating concepts (e.g. UMAC, Openness) as well as standard TIA Portal functions (e.g. Undo/Redo), familiarization is easy both for drive experts as well as SIMATIC users. Special focus is placed on the interaction between SIMATIC and SINAMICS, especially when connecting the SINAMICS drives to SIMATIC technology objects.

Integration

Supported frequency converters

SINAMICS Startdrive Basic enables complete commissioning, diagnostics, parameterization, optimization and connection to the PLC for the following SINAMICS converters integrated in SINAMICS Startdrive:

- SINAMICS G120, G120C, G120D, G120P
- SINAMICS G115D
- SINAMICS G130, G150
- SINAMICS S120, S150
- SINAMICS S210
- SINAMICS MV

SINAMICS Startdrive Advanced

With SINAMICS Startdrive Advanced (available as of V15) you benefit from powerful engineering functions that save you considerable time and ultimately costs.

- Advanced functions for SINAMICS Startdrive: Safety acceptance test for SINAMICS G120, SINAMICS S120 and SINAMICS S210
 - Safety Activation Test
 - Improved optimization options in the drive for CU320-2 PN/DP and CU310-2 PN-based drive units: Extended measuring functions (available as of V5.2 SP3)
 - Prompted acceptance test wizard for all drive-based Safety Integrated functions (Basic and Extended Safety)
 - Automatic and safety function-specific generation of traces to analyze the machine behavior
 - Generation of an acceptance report as Excel file (xlsx format, can also be used with OpenOffice)
 - Available for SINAMICS G120, G120C, G115D, G120D, G120P, S120 and S210
- Also contains all Startdrive Basic functions
- License key only required, no additional installation

New in V17

Startdrive Basic V17

- Extension for UMAC: Additional function right for drive parameter changes including DCC
- Extension of the SINAMICS S210 family: Support of the SINAMICS firmware V5.2 SP3
- Extension of the SINAMICS S120 family: Support of CU320-2 DP (in V4.8 or higher) for SINAMICS S120 Booksize and Chassis
- Extension of the SINAMICS MV family: Support of the SINAMICS firmware V5.2 SP2
- Extensions for CU320-2 PN/DP and CU310-2 PN-based drive units
 - Support of the SINAMICS firmware V5.2 SP3
 - User-defined parameter list
 - Data set switchover (drive, motor, encoder and command data sets)
 - Improved optimization option in the drive (Bode diagram)
 - Extensions for CU320-2 Integrated in SIMATIC Drive Controller
 - EPOS (basic positioner)
 - DCC (Drive Control Chart)
 - Improved interaction between drives and SIMATIC technology objects
 - Transfer of optimization parameters from One Button Tuning (OBT) of the drive to the technology object
 - Display of drive configuration status in the technology object
 - Support of new SINAMICS Technology Extensions (TEC) function, see <https://support.industry.siemens.com/cs/ww/en/view/109771648>
- Extension of the SINAMICS G120 family:
 - Support of the SINAMICS G115D distributed drive
 - Improved AS-i connection for SINAMICS G115D AS-i (in combination with SIMATIC ET200SP AS-i Master)
- Extension of technology object "BasicPosControl"
 - Physical units
 - Entry of mechanical data
- Extension of Openness for drive units
 - Support of the SINAMICS G115D distributed drive
 - More information on Startdrive Openness can be found at <https://support.industry.siemens.com/cs/ww/en/view/109763491>

Engineering tools

SINAMICS Startdrive commissioning tool

Integration

Startdrive Advanced V17

- Extension of safety acceptance test
 - Safety Activation Test
 - Support of the SINAMICS G115D distributed drive
- Extension for CU320-2 PN/DP and CU310-2 PN-based drive units: Improved optimization options in the drive: Extended measuring functions (available as of V5.2 SP3)

Installation versions

SINAMICS Startdrive can be installed as an optional package to SIMATIC STEP 7 or as a stand-alone application (without SIMATIC STEP 7).

System requirements

The following table shows the recommended hardware and system equipment for the operation of SINAMICS Startdrive.

Hardware	Recommendation
Computer	As of SIMATIC FIELD PG M5 Advanced (or comparable PC)
Processor	Intel Core i5-8400H (2.5 ... 4.2 GHz; 4 cores + hyper-threading; 8 MB Smart Cache)
RAM	16 GB or more (32 GB for large projects)
Hard disk	SSD with at least 50 GB available memory
Screen resolution	15.6" Full HD display (1920 × 1080 or larger)
Operating systems	<ul style="list-style-type: none"> • Windows 10 (64 bit) <ul style="list-style-type: none"> - Windows 10 Professional Version 1909, 2004, 2009/20H2 - Windows 10 Enterprise 1909, 2004, 2009/20H2 - Windows 10 IoT Enterprise 2016 LTSC - Windows 10 IoT Enterprise 2019 LTSC • Windows Server (64 bit) <ul style="list-style-type: none"> - Windows 10 Professional Version 1909, 2004, 2009/20H2 - Windows 10 Enterprise 1909, 2004, 2009/20H2 - Windows 10 IoT Enterprise 2016 LTSC - Windows 10 IoT Enterprise 2019 LTSC

Compatibility with other products

- SINAMICS Startdrive V17 operates with STEP 7, WinCC and Scout TIA V17 in one framework
- SINAMICS Startdrive V17 can be installed on the same computer as other versions of SINAMICS Startdrive V12 to V16
- SINAMICS Startdrive can be installed on the same computer as SINAMICS MICROMASTER STARTER

Supported virtualization platforms

SINAMICS Startdrive can be installed in a virtual machine. For this purpose, one of the following virtualization platforms in the specified version or a newer version can be used:

- Windows 10 Professional Version 1909, 2004, 2009/20H2
- Windows 10 Enterprise 1909, 2004, 2009/20H2
- Windows 10 IoT Enterprise 2016 LTSC
- Windows 10 IoT Enterprise 2019 LTSC

Supported security programs

The following security programs have been tested with SINAMICS Startdrive V17:

- Virus scanners:
 - Symantec Endpoint Protection 14.2
 - Trend Micro OfficeScan 12.0
 - McAfee Endpoint Security (ENS) 10.6
 - Kaspersky Endpoint Security 11.3
 - Windows Defender
 - Qihoo 360 "Safe Guard 12.1" + "Virus Scanner"
- Encryption software:
 - Microsoft BitLocker
- Host-based Intrusion Detection System
 - McAfee Application Control 8.2

Partner

Partner at Siemens

At your service locally, around the globe for consulting, sales, training, service, support, spare parts on the entire portfolio of Siemens.

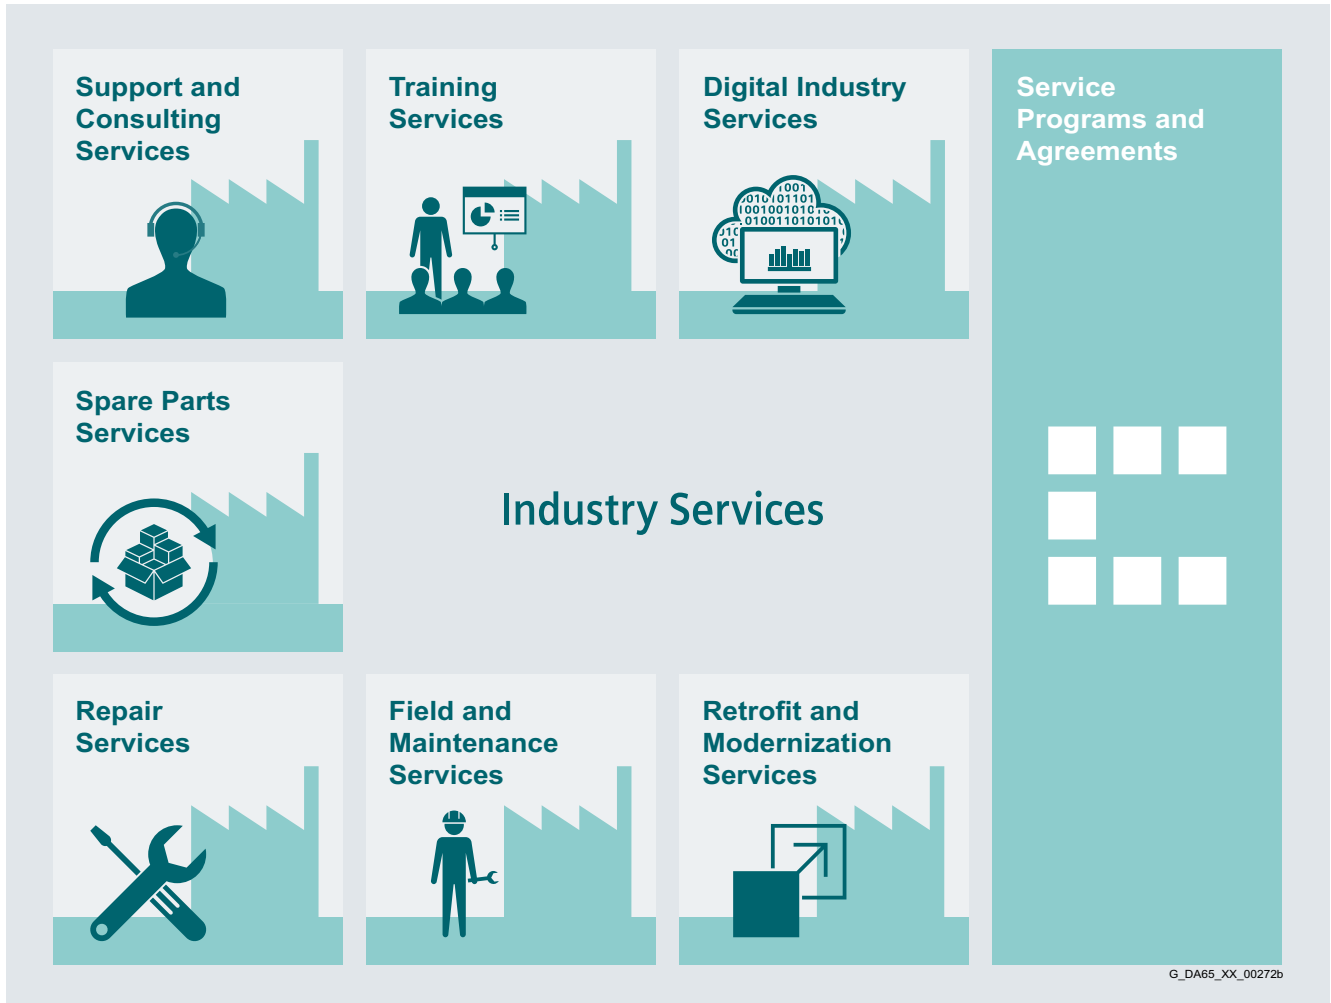

Your partner can be found in our Personal Contacts Database at: www.siemens.com/automation-contact

You start by selecting

- the required competence,
- products and branches,
- a country and a city

or by a

- location search or free text search.

Overview

Keep your business running and shaping your digital future – with Industry Services

Optimizing the productivity of your equipment and operations can be a challenge, especially with constantly changing market conditions. Working with our service experts makes it easier. We understand your industry's unique processes and provide the services needed so that you can better achieve your business goals.

You can count on us to maximize your uptime and minimize your downtime, increasing your operations' productivity and reliability. When your operations have to be changed quickly to meet a new demand or business opportunity, our services give you the flexibility to adapt. Of course, we take care that your production is protected against cyber threats. We assist in keeping your operations as energy and resource efficient as possible and reducing your total cost of ownership. As a trendsetter, we ensure that you can capitalize on the opportunities of digitalization and by applying data analytics to enhance decision making: You can be sure that your plant reaches its full potential and retains this over the longer lifespan.

You can rely on our highly dedicated team of engineers, technicians and specialists to deliver the services you need – safely, professionally and in compliance with all regulations. We are there for you, where you need us, when you need us.

Services and documentation

Industry Services

Industry Services – Portfolio overview

Overview

Digital Industry Services

Digital Industry Services make your industrial processes transparent to gain improvements in productivity, asset availability, and energy efficiency.

Production data is generated, filtered and translated with intelligent analytics to enhance decision-making.

This is done whilst taking data security into consideration and with continuous protection against cyber-attack threats.

www.siemens.com/global/en/products/services/industry/digital-industry-services.html

Training Services

From the basics and advanced to specialist skills, SITRAIN courses provide expertise right from the manufacturer – and encompass the entire spectrum of Siemens products and systems for the industry.

Worldwide, SITRAIN courses are available wherever you need a training course in more than 170 locations in over 60 countries.

<https://support.industry.siemens.com/cs/ww/en/sc/2226>

Support and Consulting Services

Industry Online Support site for comprehensive information, application examples, FAQs and support requests.

Technical and Engineering Support for advice and answers for all inquiries about functionality, handling, and fault clearance. The Service Card as prepaid support for value added services such as Priority Call Back or Extended Support offers the clear advantage of quick and easy purchasing.

Information & Consulting Services, e.g. SIMATIC System Audit; clarity about the state and service capability of your automation system or Lifecycle Information Services; transparency on the lifecycle of the products in your plants.

<https://support.industry.siemens.com/cs/ww/en/sc/2235>

Spare Parts

Spare Parts Services are available worldwide for smooth and fast supply of spare parts – and thus optimal plant availability. Genuine spare parts are available for up to ten years. Logistic experts take care of procurement, transport, custom clearance, storage and order manage-

ment. Reliable logistics processes ensure that components reach their destination as needed.

Since not all spare parts can be kept in stock at all times, Siemens offers a preventive measure for spare parts provisioning on the customer's premises with optimized **Spare Parts Packages** for individual products, custom-assembled drive components and entire integrated drive trains – including risk consulting.

Asset Optimization Services help you design a strategy for parts supply where your investment and carrying costs are reduced and the risk of obsolescence is avoided.

<https://support.industry.siemens.com/cs/ww/en/sc/2110>

Repair Services

Repair Services are offered on-site and in regional repair centers for fast restoration of faulty devices' functionality.

Also available are extended repair services, which include additional diagnostic and repair measures, as well as emergency services.

<https://support.industry.siemens.com/cs/ww/en/sc/2154>

Field and Maintenance Services

Siemens specialists are available globally to provide expert field and maintenance services, including commissioning, functional testing, preventive maintenance and fault clearance.

All services can be included in customized service agreements with defined reaction times or fixed maintenance intervals.

<https://support.industry.siemens.com/cs/ww/en/sc/2265>

Retrofit and Modernization Services

Provide a cost-effective solution for the expansion of entire plants, optimization of systems or upgrading existing products to the latest technology and software, e.g. migration services for automation systems.

Service experts support projects from planning through commissioning and, if desired over the entire extended lifespan, e.g. Retrofit for Integrated Drive Systems for an extended lifetime of your machines and plants.

<https://support.industry.siemens.com/cs/ww/en/sc/2286>

Service Programs and Agreements

A technical Service Program or Agreement enables you to easily bundle a wide range of services into a single annual or multi-year agreement.

You pick the services you need to match your unique requirements or fill gaps in your organization's maintenance capabilities.

Programs and agreements can be customized as KPI-based and/or performance-based contracts.

Online Support for Siemens Industry Products

Siemens Industry and Online Support with some 1.7 million visitors per month is one of the most popular web services provided by Siemens. It is the central access point for comprehensive technical know-how about products, systems and services for automation and drives applications as well as for process industries.

In connection with the challenges and opportunities related to digitalization you can look forward to continued support with innovative offerings.

Training

SITRAIN – Digital Industry Academy

Time for learning

Today's demands on our knowledge are every bit as diverse and dynamic as our profession itself. We keep learning more and longer – for our work, for our career and for ourselves. Advancing digitalization entails new topics and is also changing the way we absorb and process knowledge. SITRAIN – Digital Industry Academy offers the right source of knowledge here, which we can use anytime in just the way we need it. The time for learning is now.

Knowledge for every need

With its three areas – SITRAIN open, SITRAIN access and SITRAIN personal – SITRAIN offers you an all-encompassing range of options for an ongoing expansion of your knowledge and skills, suited for every type of learner. And SITRAIN uses advancing digitalization to continuously expand content and offer new training methods.

Find

offer here

SITRAIN – Digital Industry Academy Customer Support Germany

Tel.: +49 911 895-7575

Email: sitrain.digital.industry.academy.de@siemens.com

Knowledge you can always find

SITRAIN open bundles useful information, worthwhile data and up-to-date expert knowledge about Siemens products for industry. Search it anytime, find anything – and always the right stuff.

Knowledge that gets you ahead

SITRAIN access is learning in the digital age. It offers you individualized ways to build your knowledge and access to exclusive digital training courses. Take advantage of sustainable learning success with a wide range of learning methods. Improve your skills – whether working in groups with others, or by yourself. Whenever, wherever and however you need to.

Knowledge you can experience

We all want to learn from the best. And SITRAIN personal's training courses let you benefit from our well-practiced trainers' expert knowledge, along with direct access to our training equipment. That's the best way to convey knowledge – whether at your company or in our training classrooms.

Overview

SINAMICS S210 training case

The SINAMICS S210 training case (version with 2 axes and PROFINET) is a convincing demonstration system thanks to its compact design. It is suitable for direct presentations as well as for tests in technical departments. The training case enables the functions of SINAMICS S210 servo drive system to be demonstrated and tested quickly and easily.

It contains the following components:

- 2 × SINAMICS S210 servo converters, 0.1 kW, 230 V 1 AC
- 2 × SIMOTICS S-1FK2 servomotors, High Dynamic (1 × singleturn, 1 × multiturn, without break)
- 2 × One Cable Connection (OCC) motor connection cable
- Rail, prepared for installation of a controller, e.g. SIMATIC S7-1500 (controller not included in scope of delivery)

The SINAMICS S210 training case is supplied as a trolley with a hood.

Technical specifications

SINAMICS S210 training case	6AG1067-1AA33-0AA0
Supply voltage	230 V 1 AC
Dimensions	
• Width	420 mm (16.54 in)
• Height	580 mm (22.83 in)
• Depth	340 mm (13.39 in)
Weight, approx.	21 kg (46.3 lb)

Services and documentation

Applications

Overview

Our understanding of an application is the customer-specific solution of an automation task based on standard hardware and software components. In this respect, industry knowledge and technological expertise are just as important as expert knowledge about how our products and systems work. We are setting ourselves this challenge with more than 280 application engineers in 20 countries.

Application centers

We currently have application centers in:

- Germany:
 - Head Office in Erlangen and in other German regions, e.g. in Munich, Nuremberg, Stuttgart, Mannheim, Frankfurt, Chemnitz, Cologne, Bielefeld, Bremen, Hanover, Hamburg
- Belgium: Brussels
- Brazil: Sao Paulo
- China: Beijing and 12 regions
- Denmark: Ballerup
- France: Paris
- Great Britain: Manchester
- India: Mumbai
- Italy: Bologna, Milan
- Japan: Tokyo, Osaka
- The Netherlands: The Hague
- Austria: Vienna
- Poland: Warsaw
- Sweden: Göteborg
- Switzerland: Zurich, Lausanne
- Spain: Madrid
- South Korea: Seoul
- Taiwan: Taipei
- Turkey: Istanbul
- USA: Atlanta

These application centers specialize in the use of SIMATIC/SIMOTION/SINAMICS. You therefore can rely on automation and drive specialists for implementing successful applications. By involving your personnel at an early stage in the process, we can provide a solid basis for rapid knowledge transfer, maintenance and further development of your automation solution.

Advice on applications and implementation

We offer a variety of consultation services to help you find the optimum solution for the SIMATIC/SIMOTION/SINAMICS application you want to implement:

The quotation phase includes

- clarification of technical questions,
- discussion of machine concepts and customer-specific solutions,
- selection of suitable technology and
- suggestions for implementation.

A technical feasibility study is also performed at the outset. In this way, difficult points of the application can be identified and solved early on. We can also configure and implement your application as a complete solution from a single source.

A large number of proven standard applications are available for use during the implementation phase. This saves engineering costs.

The system can be commissioned by experienced, competent personnel, if required. This saves time and trouble.

If servicing is required, we can support you on site or remotely. For further information about servicing, please see the section "Industry Services".

On-site application training

Training for the implemented applications can also be organized and carried out on site. This training for machine manufacturers and their customers does not deal with individual products, but the entire hardware and software system (for example, automation, drives and visualization).

From an initial concept to successful installation and commissioning: We provide complete support for SIMATIC/SIMOTION/SINAMICS! Contact your Siemens representative.

You can find further information at www.siemens.com/machinebuilding

Overview

Siemens Product Partners for Drives Options

Individual options for our drives

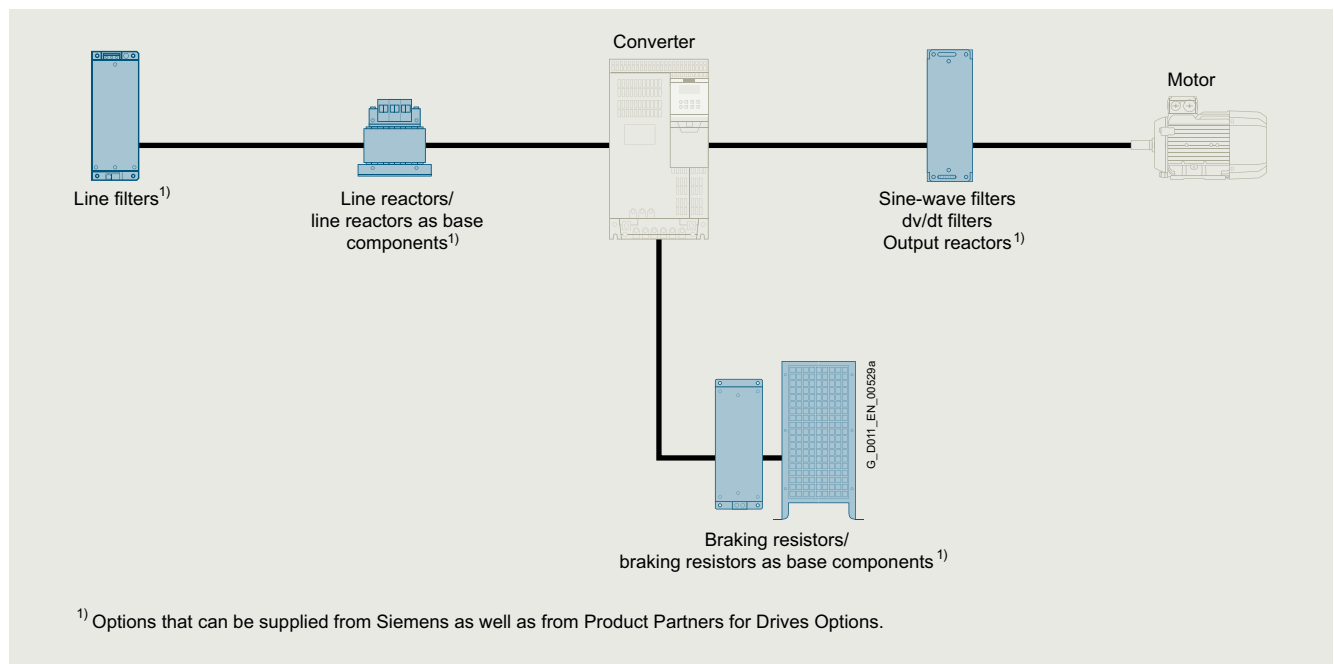

In order to meet as many customer requirements as possible in the field of drive technology, in addition to its own products, Siemens also relies on the individual and complementary services of selected partners.

We are increasingly focusing on the standard drive options, and our Siemens Product Partners for Drives Options supplement our drives with individual drive options.

This gives Siemens a unique flexibility to meet all application requirements. Naturally, we support our Siemens Product Partners for Drives Options in tailoring their options perfectly to our drives.

For you as our customer, there are multiple benefits:

- The Siemens Product Partners for Drives Options meet the same high standards of quality and performance that we place on our own products
- Drive options can be adapted to individual requirements/designs
- The Siemens Product Partners for Drives Options know our Siemens converter portfolio and can advise you individually and quickly

Services and documentation

mySupport documentation

Overview

mySupport documentation – Compiling personal documents

mySupport documentation is a web-based system for generating personalized documentation based on standard documents and is part of the Siemens Industry Online Support portal.

In mySupport, a personal document library can be created in the "Documentation" category. This library can be accessed online in mySupport or also be generated in various formats for offline use.

Previously, this functionality was available in the My Documentation Manager for configurable manuals. Due to the integration in mySupport, all entries of the Industry Online Support can now be imported into the personal document library, including FAQs or product notifications.

If you have already worked with the My Documentation Manager, all of the previously created libraries will continue to be available without restrictions in mySupport.

In addition, the personal library in mySupport can be shared with other mySupport users. In this way, a collection of relevant documents can be created very effectively and used together with other mySupport users all over the world.

You must register/log in for configuring and generating/managing.

Benefits

- Display
View, print or download standard documents or personalized documents
- Configure
Transfer standard documents or parts of them to personalized documents
- Generate/Manage
Generate and manage personalized documents in the formats PDF, RTF or XML in all available languages

Function

Opening mySupport documentation in the Industry Online Support portal

- Via the product support, entry type "Manual":
<https://support.industry.siemens.com/cs/ww/en/ps/manual>
By clicking on the required version of the manual and then "Show and configure", the manual opens in a modular view, where you can navigate from topic to topic. Here the direct link to a topic can be used and made available to other users. The selected document can be added to the personal library via "mySupport Cockpit" > "Add to mySupport documentation".
- Via the direct link
<https://support.industry.siemens.com/my/ww/en/documentation/advanced>
After logon/registration, the online help is displayed as the current document.

More information

You can find additional information on the internet at

- <https://support.industry.siemens.com/my/ww/en/documentation>
- https://support.industry.siemens.com/cs/helpcenter/en/index.htm?#persoenliche_bibliothek_aufbauen.htm

Overview

A high-quality programmable control or drive system can be used to maximum effect only if the user is aware of the performance of the products used as a result of intensive training and good technical documentation.

This is becoming more important due to the shorter innovation cycles of modern automation products and the convergence of electronics and mechanical engineering.

A comprehensive range of documentation is available which includes a Getting Started guide, operating instructions, installation manuals and a list manual.

The documents are available in hardcopy form or as a PDF file for downloading from the internet.

Information and documentation relating to SINUMERIK, SINAMICS, SIMOTION and SIMOTICS are available on the internet at <https://support.industry.siemens.com/cs/document/109476679>

Application

Explanations of the manuals:

- **Operating Instructions**
contain all the information needed to install the device and make electrical connections, information about commissioning and a description of the converter functions.
Phases of use: Control cabinet construction, commissioning, operation, maintenance and servicing.
- **Hardware Installation Manual**
contains all relevant information about the intended use of the components of a system (technical specifications, interfaces, dimensional drawings, characteristics, or possible applications), information about installation and electrical connections and information about maintenance and servicing.
Phases of use: Control cabinet configuration/construction, maintenance and servicing.
- **Operating and Installation Instructions**
(for converter and accessories)
contain all relevant information about the intended use of the components, such as technical specifications, interfaces, dimensional drawings, characteristics, or possible applications.
Phases of use: Control cabinet configuration/construction.
- **Manual/Configuration Manual**
contains all necessary information about the intended use of the components of a system, e.g. technical specifications, interfaces, dimensional drawings, characteristics, or possible applications.
Phases of use: Cabinet configuration/setup, circuit diagram configuration/drawing.
- **Commissioning Manual**
contains all information relevant to commissioning after installation and wiring. It also contains all safety and warning notices relevant to commissioning in addition to overview drawings.
Phases of use: Commissioning of components that have already been connected, configuration of system functions.
- **List Manual**
contains all parameters, function diagrams, and faults/alarms for the product/system as well as their meanings and setting options. It contains parameter data and fault/alarm descriptions with functional correlations.
Phases of use: Commissioning of components that have already been connected, configuration of system functions, fault cause/diagnosis.
- **Getting Started**
provides information about getting started for the first-time user as well as references to additional information. It contains information about the basic steps to be taken during commissioning. The information in the other documentation should be carefully observed for all of the other work required.
Phases of use: Commissioning of components that have already been connected.
- **Function Manual Drive Functions**
contains all the relevant information about individual drive functions: Description, commissioning and integration in the drive system.
Phases of use: Commissioning of components that have already been connected, configuration of system functions.

7/6	Conversion tables
7/8	Metal surcharges
7/11	Conditions of sale and delivery

Appendix

Certificates of suitability (approvals)

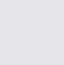

Overview

Many of the products in this catalog fulfill requirements, e.g. for UL, CSA or FM and are labeled with the corresponding approval designation.

All of the certificates of suitability, approvals, certificates, declarations of conformity, test certificates, e.g. CE, UL, Safety Integrated etc. have been performed with the associated system components as they are described in the Catalogs and Configuration Manuals.

The certificates are only valid if the products are used with the described system components, are installed according to the Installation Guidelines and used for their intended purpose.

In other cases, the vendor of these products is responsible for arranging for the issue of new certificates.

Appendix

Software licenses

Overview

Software types

Software requiring a license is categorized into types. The following software types have been defined:

- Engineering software
- Runtime software

Engineering software

This includes all software products for creating (engineering) user software, e.g. for configuring, programming, parameterizing, testing, commissioning or servicing.

Data generated with engineering software and executable programs can be duplicated for your own use or for use by third-parties free-of-charge.

Runtime software

This includes all software products required for plant/machine operation, e.g. operating system, basic system, system expansions, drivers, etc.

The duplication of the runtime software and executable programs created with the runtime software for your own use or for use by third-parties is subject to a charge.

You can find information about license fees according to use in the ordering data (e.g. in the catalog). Examples of categories of use include per CPU, per installation, per channel, per instance, per axis, per control loop, per variable, etc.

Information about extended rights of use for parameterization/configuration tools supplied as integral components of the scope of supply can be found in the readme file supplied with the relevant product(s).

License types

Siemens Industry Automation & Drive Technologies offers various types of software license:

- Floating license
- Single license
- Rental license
- Rental floating license
- Trial license
- Demo license
- Demo floating license

Floating license

The software may be installed for internal use on any number of devices by the licensee. Only the concurrent user is licensed. The concurrent user is the person using the program. Use begins when the software is started. A license is required for each concurrent user.

Single license

Unlike the floating license, a single license permits only one installation of the software per license.

The type of use licensed is specified in the ordering data and in the Certificate of License (CoL). Types of use include for example per instance, per axis, per channel, etc.

One single license is required for each type of use defined.

Rental license

A rental license supports the "sporadic use" of engineering software. Once the license key has been installed, the software can be used for a specific period of time (the operating hours do not have to be consecutive).

One license is required for each installation of the software.

Rental floating license

The rental floating license corresponds to the rental license, except that a license is not required for each installation of the software. Rather, one license is required per object (for example, user or device).

Trial license

A trial license supports "short-term use" of the software in a non-productive context, e.g. for testing and evaluation purposes. It can be transferred to another license.

Demo license

The demo license supports the "sporadic use" of engineering software in a non-productive context, for example, use for testing and evaluation purposes. It can be transferred to another license. After the installation of the license key, the software can be operated for a specific period of time, whereby usage can be interrupted as often as required.

One license is required per installation of the software.

Demo floating license

The demo floating license corresponds to the demo license, except that a license is not required for each installation of the software. Rather, one license is required per object (for example, user or device).

Certificate of License (CoL)

The CoL is the licensee's proof that the use of the software has been licensed by Siemens. A CoL is required for every type of use and must be kept in a safe place.

Downgrading

The licensee is permitted to use the software or an earlier version/release of the software, provided that the licensee owns such a version/release and its use is technically feasible.

Delivery versions

Software is constantly being updated. The following delivery versions

- PowerPack
- Upgrade

can be used to access updates.

Existing bug fixes are supplied with the ServicePack version.

PowerPack

PowerPacks can be used to upgrade to more powerful software. The licensee receives a new license agreement and CoL (Certificate of License) with the PowerPack. This CoL, together with the CoL for the original product, proves that the new software is licensed.

A separate PowerPack must be purchased for each original license of the software to be replaced.

Upgrade

An upgrade permits the use of a new version of the software on the condition that a license for a previous version of the product is already held.

The licensee receives a new license agreement and CoL with the upgrade. This CoL, together with the CoL for the previous product, proves that the new version is licensed.

A separate upgrade must be purchased for each original license of the software to be upgraded.

Overview

ServicePack

ServicePacks are used to debug existing products. ServicePacks may be duplicated for use as prescribed according to the number of existing original licenses.

License key

Siemens Industry Automation & Drive Technologies supplies software products with and without license keys.

The license key serves as an electronic license stamp and is also the "switch" for activating the software (floating license, rental license, etc.).

The complete installation of software products requiring license keys includes the program to be licensed (the software) and the license key (which represents the license).

Software Update Service (SUS)

As part of the SUS contract, all software updates for the respective product are made available to you free of charge for a period of one year from the invoice date. The contract will automatically be extended for one year if it is not canceled three months before it expires.

The possession of the current version of the respective software is a basic condition for entering into an SUS contract.

You can download explanations concerning license conditions from https://mall.industry.siemens.com/legal/ww/en/terms_of_trade_en.pdf

Appendix

Metal surcharges

Explanation of the raw material/metal surcharges ¹⁾

Surcharge calculation

To compensate for variations in the price of the raw materials silver, copper, aluminum, lead, gold, dysprosium²⁾ and/or neodym²⁾, surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The surcharges are calculated in accordance with the following criteria:

- Basic official price of the raw material
Basic official price from the day prior to receipt of the order or prior to release order (daily price) for³⁾
 - Silver (sales price, processed)
 - Gold (sales price, processed)
 and for⁴⁾
 - Copper (lower DEL notation + 1 %)
 - Aluminum (aluminum in cables)
 - Lead (lead in cables)
- Metal factor of the products
Certain products are displayed with a metal factor. The metal factor determines the official price (for those raw materials concerned) as of which the metal surcharges are applied and the calculation method used (weight or percentage method). An exact explanation is given below.

Structure of the metal factor

The metal factor consists of several digits; the first digit indicates whether the percentage method of calculation refers to the list price or a possible discounted price (customer net price) (L = list price / N = customer net price).

The remaining digits indicate the method of calculation used for the respective raw material. If no surcharge is added for a raw material, a "-" is used.

1st digit	List or customer net price using the percentage method
2nd digit	for silver (AG)
3rd digit	for copper (CU)
4th digit	for aluminum (AL)
5th digit	for lead (PB)
6th digit	for gold (AU)
7th digit	for dysprosium (Dy) ²⁾
8th digit	for neodym (Nd) ²⁾

Weight method

The weight method uses the basic official price, the daily price and the raw material weight. In order to calculate the surcharge, the basic official price must be subtracted from the daily price. The difference is then multiplied by the raw material weight.

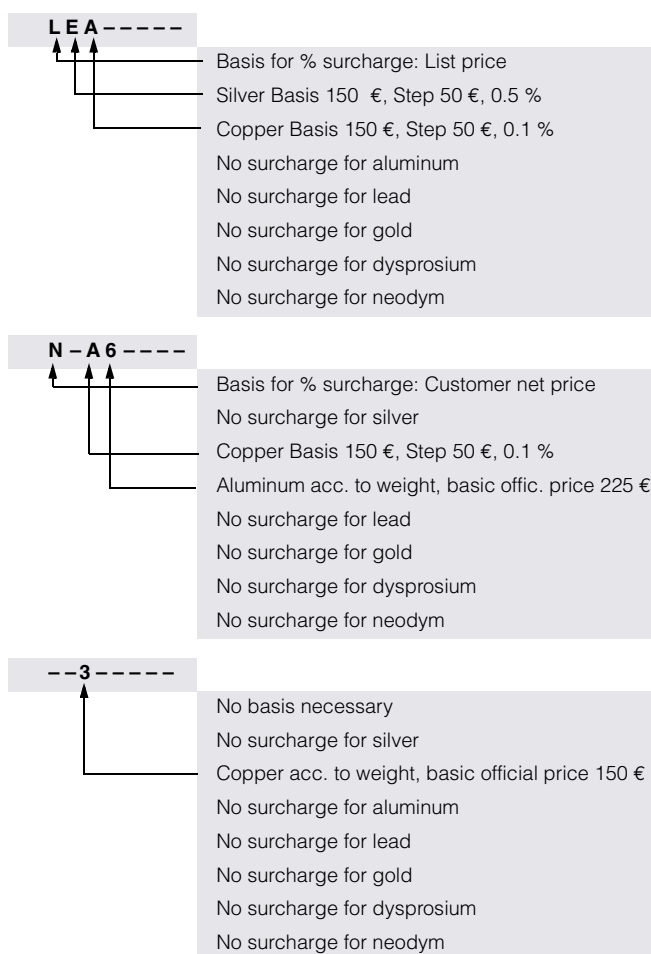

The basic official price can be found in the table below using the number (1 to 9) of the respective digit of the metal factor. The raw material weight can be found in the respective product descriptions.

Percentage method

Use of the percentage method is indicated by the letters A-Z at the respective digit of the metal factor.

The surcharge is increased - dependent on the deviation of the daily price compared with the basic official price - using the percentage method in "steps" and consequently offers surcharges that remain constant within the framework of this "step range". A higher percentage rate is charged for each new step. The respective percentage level can be found in the table below.

Metal factor examples

¹⁾ Refer to the separate explanation on the next page regarding the raw materials dysprosium and neodym (= rare earths).

²⁾ For a different method of calculation, refer to the separate explanation for these raw materials on the next page.

³⁾ Source: Umicore, Hanau (www.metalsmanagement.umicore.com).

⁴⁾ Source: Schutzvereinigung DEL-Notiz e.V. (www.del-notiz.org).

Explanation of the raw material/metal surcharges for dysprosium and neodym (rare earths)

Surcharge calculation

To compensate for variations in the price of the raw materials silver¹⁾, copper¹⁾, aluminum¹⁾, lead¹⁾, gold¹⁾, dysprosium and/or neodym, surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. The surcharge for dysprosium and neodym is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The surcharge is calculated in accordance with the following criteria:

- Basic official price of the raw material²⁾
Three-month basic average price (see below) in the period before the quarter in which the order was received or the release order took place (= average official price) for
- dysprosium (Dy metal, 99 % min. FOB China; USD/kg)
- neodym (Nd metal, 99 % min. FOB China; USD/kg)
- Metal factor of the products
Certain products are displayed with a metal factor. The metal factor indicates (for those raw materials concerned) the basic official price as of which the surcharges for dysprosium and neodym are calculated using the weight method. An exact explanation of the metal factor is given below.

Three-month average price

The prices of rare earths vary according to the foreign currency, and there is no freely accessible stock exchange listing. This makes it more difficult for all parties involved to monitor changes in price. In order to avoid continuous adjustment of the surcharges, but to still ensure fair, transparent pricing, an average price is calculated over a three-month period using the average monthly foreign exchange rate from USD to EUR (source: European Central Bank). Since not all facts are immediately available at the start of each month, a one-month buffer is allowed before the new average price applies.

Examples of calculation of the average official price:

Period for calculation of the average price:	Period during which the order/release order is effected and the average price applies:
Sep 2012 - Nov 2012	Q1 in 2013 (Jan - Mar)
Dec 2012 - Feb 2013	Q2 in 2013 (Apr - Jun)
Mar 2013 - May 2013	Q3 in 2013 (Jul - Sep)
Jun 2013 - Aug 2013	Q4 in 2013 (Oct - Dec)

Structure of the metal factor

The metal factor consists of several digits; the first digit is not relevant to the calculation of dysprosium and neodym.

The remaining digits indicate the method of calculation used for the respective raw material. If no surcharge is added for a raw material, a "-" is used.

1st digit	List or customer net price using the percentage method
2nd digit	for silver (AG) ¹⁾
3rd digit	for copper (CU) ¹⁾
4th digit	for aluminum (AL) ¹⁾
5th digit	for lead (PB) ¹⁾
6th digit	for gold (AU) ¹⁾
7th digit	for dysprosium (Dy)
8th digit	for neodym (Nd)

Weight method

The weight method uses the basic official price, the average price and the raw material weight. In order to calculate the surcharge, the basic official price must be subtracted from the average price. The difference is then multiplied by the raw material weight.

The basic official price can be found in the table below using the number (1 to 9) of the respective digit of the metal factor. Your Sales contact can inform you of the raw material weight.

Metal factor examples

-----71	No basis necessary
↑	No surcharge for silver
↑	No surcharge for copper
↑	No surcharge for aluminum
↑	No surcharge for lead
↑	No surcharge for gold
↑	Dysprosium acc. to weight, basic official price 300 €
↑	Neodym acc. to weight, basic official price 50 €

¹⁾ For a different method of calculation, refer to the separate explanation for these raw materials on the previous page.

1. General Provisions

By using this catalog you can purchase products (hardware, software and services) described therein from Siemens Aktiengesellschaft subject to the following Terms and Conditions of Sale and Delivery (hereinafter referred to as "T&C"). Please note that the scope, the quality and the conditions for supplies and services, including software products, by any Siemens entity having a registered office outside Germany, shall be subject exclusively to the General Terms and Conditions of the respective Siemens entity. The following T&C apply exclusively for orders placed with Siemens Aktiengesellschaft, Germany.

1.1 For customers with a seat or registered office in European Union

For customers with a seat or registered office in European Union, the following terms and conditions apply subordinate to T&C:

- for products, which include specific terms and conditions in the description text, these specific terms and conditions shall apply and subordinate thereto,
- for stand-alone software products and software products forming a part of a product or project, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or registered Office in Germany"¹⁾ and/or
- for consulting services the "Allgemeine Geschäftsbedingungen für Beratungsleistungen der Division DF – Deutschland" (available only in German) and/or
- for other services, the „Supplementary Terms and Conditions for Services ("BL")¹⁾ and/or
- for other supplies the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"¹⁾.

In case such supplies should contain Open Source Software, the conditions of which shall prevail over the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"¹⁾, a notice will be contained in the scope of delivery in which the applicable conditions for Open Source Software are specified. This shall apply mutatis mutandis for notices referring to other third party software components.

1.2 For customers with a seat or registered office outside European Union

For customers with a seat or registered office outside European Union, the following terms and conditions apply subordinate to T&C:

- for products, which include specific terms and conditions in the description text, these specific terms and conditions shall apply and subordinate thereto,
- for consulting services the "Standard Terms and Conditions for Consulting Services of the Division DF for Customers with a Seat or Registered Office Outside of Germany"¹⁾ and/or
- for other services the "International Terms & Conditions for Services"¹⁾ supplemented by "Software Licensing Conditions"¹⁾ and/or
- for other supplies of hard- and software the "International Terms & Conditions for Products"¹⁾ supplemented by "Software Licensing Conditions"¹⁾

1.3 For customers with master or framework agreement

To the extent our supplies and/or services offered are covered by an existing master or framework agreement, the terms and conditions of that agreement shall apply instead of T&C.

2. Prices

The prices are in € (Euro) ex point of delivery, exclusive of packaging.

The sales tax (value added tax) is not included in the prices. It shall be charged separately at the respective rate according to the applicable statutory legal regulations.

Prices are subject to change without prior notice. We will charge the prices valid at the time of delivery.

To compensate for variations in the price of raw materials (e.g. silver, copper, aluminum, lead, gold, dysprosium and neodym), surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials.

A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The metal factor of a product indicates the basic official price (for those raw materials concerned) as of which the surcharges on the price of the product are applied, and with what method of calculation.

You will find a detailed explanation of the metal factor on the page headed "Metal surcharges".

To calculate the surcharge (except in the cases of dysprosium and neodym), the official price from the day prior to that on which the order was received or the release order was effected is used.

To calculate the surcharge applicable to dysprosium and neodym ("rare earths"), the corresponding three-month basic average price in the quarter prior to that in which the order was received or the release order was effected is used with a one-month buffer (details on the calculation can be found in the explanation of the metal factor).

3. Additional Terms and Conditions

The dimensions are in mm. In Germany, according to the German law on units in measuring technology, data in inches apply only to devices for export.

Illustrations are not binding.

Insofar as there are no remarks on the individual pages of this catalog – especially with regard to data, dimensions and weights given – these are subject to change without prior notice.

¹⁾ The text of the Terms and Conditions of Siemens AG can be downloaded at https://mall.industry.siemens.com/legal/ww/en/terms_of_trade_en.pdf

Appendix

Conditions of sale and delivery

4. Export Regulations

We shall not be obligated to fulfill any agreement if such fulfillment is prevented by any impediments arising out of national or international foreign trade or customs requirements or any embargoes and/or other sanctions.

Export may be subject to license. We shall indicate in the delivery details whether licenses are required under German, European and US export lists.

Our products are controlled by the U.S. Government (when labeled with "ECCN" unequal "N") and authorized for export only to the country of ultimate destination for use by the ultimate consignee or end-user(s) herein identified. They may not be resold, transferred, or otherwise disposed of, to any other country or to any person other than the authorized ultimate consignee or end-user(s), either in their original form or after being incorporated into other items, without first obtaining approval from the U.S. Government or as otherwise authorized by U.S. law and regulations. Products labeled with "AL" unequal "N" are subject to European / national export authorization.

The export indications can be viewed in advance in the description of the respective goods on the Industry Mall, our online catalog system. Only the export labels "AL" and "ECCN" indicated on order confirmations, delivery notes and invoices are authoritative.

Products without label, with label "AL:N" / "ECCN:N", or label "AL:9X9999" / "ECCN: 9X9999" may require authorization from responsible authorities depending on the final end-use, or the destination.

If you transfer goods (hardware and/or software and/or technology as well as corresponding documentation, regardless of the mode of provision) delivered by us or works and services (including all kinds of technical support) performed by us to a third party worldwide, you shall comply with all applicable national and international (re-)export control regulations. In any event of such transfer of goods, works and services you shall comply with the (re-) export control regulations of the Federal Republic of Germany, of the European Union and of the United States of America.

Prior to any transfer of goods, works and services provided by us to a third party you shall in particular check and guarantee by appropriate measures that

- there will be no infringement of an embargo imposed by the European Union, by the United States of America and/ or by the United Nations by such transfer, by brokering of contracts concerning those goods, works and services or by provision of other economic resources in connection with those goods, works and services, also considering the limitations of domestic business and prohibitions of by-passing those embargoes;
- such goods, works and services are not intended for use in connection with armaments, nuclear technology or weapons, if and to the extent such use is subject to prohibition or authorization, unless required authorization is provided;
- the regulations of all applicable Sanctioned Party Lists of the European Union and the United States of America concerning the trading with entities, persons and organizations listed therein are considered.

If required to enable authorities or us to conduct export control checks, you, upon request by us, shall promptly provide us with all information pertaining to the particular end customer, the particular destination and the particular intended use of goods, works and services provided by us, as well as any export control restrictions existing.

You acknowledge that under the EU embargo regulations against Iran, Syria and Russia respectively the sale of certain listed goods and related services is subject to authorization by the competent export control authorities of the European Union. If (i) the goods or services ordered by you are destined for Iran, Syria or Russia, and (ii) the contract for our supplies and/or services is subject to prior authorization of the competent export control authorities of the European Union, the contract between you and us shall come into force in this respect only upon granting of such authorization.

The products listed in this catalog may be subject to European/German and/or US export regulations. Any export requiring approval is therefore subject to authorization by the relevant authorities.

Errors excepted and subject to change without prior notice.

Selection and ordering at Siemens Industry Mall, downloading and ordering catalogs

Easy product selection and ordering: Industry Mall

Industry Mall

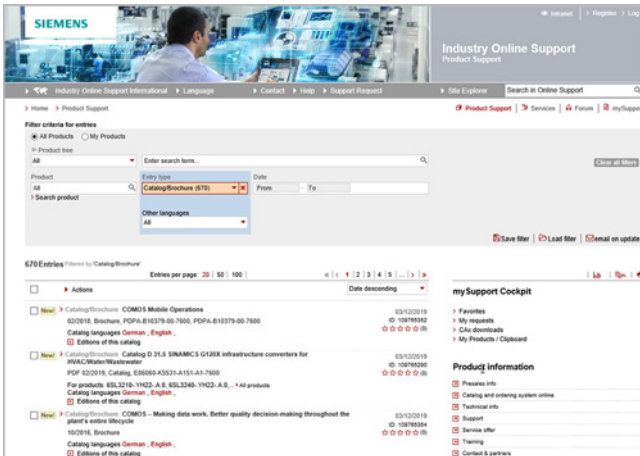

The Industry Mall is a Siemens AG internet ordering platform. It provides you with online access to a comprehensive product spectrum that is presented in an informative, well-organized way.

Powerful search functions help you select the required products, while configurators enable you to configure complex product and system components quickly and easily. CAX data are also available for you to use.

Data transfer allows the entire procedure, from selection through ordering to tracking and tracing, to be carried out online. Availability checks, individual customer discounting, and quotation preparation are also possible.

Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that may be implemented, please visit <https://www.siemens.com/industrialsecurity>

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under <https://www.siemens.com/cert>

Subject to changes and errors. The information given in this document only contains general descriptions and/or performance features which may not always specifically reflect those described, or which may undergo modification in the course of further development of the products. The requested performance features are binding only when they are expressly agreed upon in the concluded contract.

All product designations may be trademarks or other rights of Siemens AG, its affiliated companies or other companies whose use by third parties for their own purposes could violate the rights of the respective owner.
